PT   Novel human cancer associated protein encoded within open reading frame
PT   of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS   Claim 16; SEQ ID NO 838; 182pp; English.
XX
CC   The invention relates to cancer-associated proteins (CAP) and the cancer-
CC   associated (CA) nucleic acids encoding them. The invention also relates
CC   to a method for treating cancers involving administering to a patient an
CC   inhibitor of CAP, and a method of screening for anticancer activity in a
CC   potential drug involving providing a cell that expresses a CA gene,
CC   contacting a tissue sample derived from a cancer cell with an anticancer
CC   drug candidate and monitoring the effect of the anticancer drug candidate
CC   on expression of the CA gene. The CAP proteins are useful for detecting
CC   cancer associated with expression of a CAP protein in a test cell sample
CC   and for screening for a bioactive agent capable of modulating the
CC   activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC   cancer, involving determining the expression of a CA nucleic acid in a
CC   tissue. This sequence represents a human CA gene of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Determining a predisposition for or the occurrence of neurodegenerative
PT   disease, e.g. Alzheimer's disease by detecting in a target nucleic acid
PT   the presence or absence of an allelic variant of one or more polymorphic
PT   regions.
XX
PS   Claim 9; Page 584-page 618; 848pp; English.
XX
CC   The present invention relates to a method (M1) for determining a
CC   predisposition for or the occurrence of neurodegenerative disease in a
CC   subject. The method comprises detecting in a target nucleic acid obtained
CC   from the subject the presence or absence of an allelic variant of one or
CC   more polymorphic regions of one or more genes selected from uPA
CC   (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulin-
CC   degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
CC   lypase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
CC   presence of at least one of the allelic variant of one or more
CC   polymorphic regions is indicative of a predisposition for or the
CC   occurrence of neurodegenerative disease. The genes are all located on
CC   chromosome 10. M1 is useful for determining a predisposition for or the
CC   occurrence of, and for treating neurodegenerative disease, particularly
CC   Alzheimer's disease.

PT   Determining a predisposition for or the occurrence of neurodegenerative
PT   disease, e.g. Alzheimer's disease by detecting in a target nucleic acid
PT   the presence or absence of an allelic variant of one or more polymorphic
PT   regions.
XX
PS   Claim 22; Page 549-584; 848pp; English.
XX
CC   The present invention relates to a method (M1) for determining a
CC   predisposition for or the occurrence of neurodegenerative disease in a
CC   subject. The method comprises detecting in a target nucleic acid obtained
CC   from the subject the presence or absence of an allelic variant of one or
CC   more polymorphic regions of one or more genes selected from uPA
CC   (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulin-
CC   degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
CC   lypase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
CC   presence of at least one of the allelic variant of one or more
CC   polymorphic regions is indicative of a predisposition for or the
CC   occurrence of neurodegenerative disease. The genes are all located on
CC   chromosome 10. M1 is useful for determining a predisposition for or the
CC   occurrence of, and for treating neurodegenerative disease, particularly
CC   Alzheimer's disease.

PT Determining a predisposition for or the occurrence of neurodegenerative
PT disease, e.g. Alzheimer's disease by detecting in a target nucleic acid
PT the presence or absence of an allelic variant of one or more polymorphic
PT regions.
XX
PS Claim 9; Page 769-823; 848pp; English.
XX
CC The present invention relates to a method (M1) for determining a
CC predisposition for or the occurrence of neurodegenerative disease in a
CC subject. The method comprises detecting in a target nucleic acid obtained
CC from the subject the presence or absence of an allelic variant of one or
CC more polymorphic regions of one or more genes selected from uPA
CC (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulin-
CC degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
CC lypase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
CC presence of at least one of the allelic variant of one or more
CC polymorphic regions is indicative of a predisposition for or the
CC occurrence of neurodegenerative disease. The genes are all located on
CC chromosome 10. M1 is useful for determining a predisposition for or the
CC occurrence of, and for treating neurodegenerative disease, particularly
CC Alzheimer's disease.

PT disease, particularly Alzheimer's disease, comprises determining the
PT presence of a polymorphism in the uPA, SNCG, IDE, KNSL1, LIPA or TNFRSF6
PT gene.
XX
PS Claim 9; SEQ ID NO 484; 205pp; English.
XX
CC This invention relates to a novel method of determining a predisposition
CC for or the occurrence of neurodegenerative disease comprising detecting
CC in a target nucleic acid obtained from the subject the presence of an
CC allelic variant of polymorphic regions of human genes selected from
CC urokinase plasminogen activator (uPA), gamma-synuclein (SNCG), insulin
CC degrading enzyme (IDE), kinesin-like protein 1 (KNSL1), lysosomal acid
CC lipase (LIPA) and tumour necrosis factor receptor SF6 (TNFRSF6). The
CC method is useful in determining the presence or predisposition to a
CC neurodegenerative disease, particularly Alzheimer's disease. The present
CC sequence is that of a region of human DNA, containing the human IDE and
CC KNSL1 genes, which is related to the invention.

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
PS   claim 16; seqid 548; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

; Sequence 18, Application US/09834700
```

```
; Patent No. 6958214
; GENERAL INFORMATION:
;  APPLICANT: Braun, A.
;  TITLE OF INVENTION: POLYMORPHIC KINASE ANCHOR PROTEINS AND
;  TITLE OF INVENTION:  NUCLEIC ACIDS ENCODING THE SAME
;  FILE REFERENCE: 24736-2035
;  CURRENT APPLICATION NUMBER: US/09/834,700
;  CURRENT FILING DATE:  2001-04-12
;  PRIOR APPLICATION NUMBER: 60/217,251
;  PRIOR FILING DATE: 2000-07-10
;  PRIOR APPLICATION NUMBER: 60/240,335
;  PRIOR FILING DATE: 2000-10-13
;  NUMBER OF SEQ ID NOS: 25
;  SOFTWARE: FastSEQ for Windows Version 4.0
; SEQ ID NO 18
;   LENGTH: 162025
;   TYPE: DNA
;   ORGANISM: Homo Sapien
;   FEATURE:
;   NAME/KEY: allele
;   LOCATION: 156,277
;   OTHER INFORMATION: Nucleotide sequence of chromosome 17 containing
;   OTHER INFORMATION: the genomic sequence of the allelic variant
;   OTHER INFORMATION: AKAP10-1
US-09-834-700-18

  TITLE     Direct Submission
  JOURNAL   Submitted (22-FEB-2005) MIPS, Ingolstaedter Landstr.1, D-85764
            Neuherberg, GERMANY
COMMENT     Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
            Research Center (DKFZ); Email s.wiemann@dkfz-heidelberg.de;
            sequenced by Medigenomix (Martinsried/Germany) within the cDNA
            sequencing consortium of the German Genome Project.
            This clone (DKFZp686K21248) is available at the RZPD Deutsches
            Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany.
            Please contact RZPD for ordering:
            http://www.rzpd.de/cgi-bin/products/cl.cgi?CloneID=DKFZp686K21248
            Further information about the clone and the sequencing project is
            available at http://mips.gsf.de/projects/cdna/.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jun 17, 2002 this sequence version replaced gi:16416169.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            RP11-383C6 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

RESULT 3
AL391648/c

LOCUS	AL391648 176432 bp DNA linear HTG 18-JUL-2001
DEFINITION	Homo sapiens chromosome 10 clone RP11-203A7, 9 unordered pieces.
ACCESSION	AL391648
VERSION	AL391648.12 GI:14669309
KEYWORDS	HTG; HTGS_PHASE1; HTGS_CANCELLED.
SOURCE	Homo sapiens (human)
ORGANISM	Homo sapiens Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.

            -------------- Project Information
            Center project name: bA203A7
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Sequencing vector: plasmid; L08752; 100% of reads
            Chemistry: Dye-terminator Big Dye; 100% of reads
            Consensus quality: 174005 bases at least Q40
            Consensus quality: 174806 bases at least Q30
            Consensus quality: 175273 bases at least Q20
            Insert size: 175632; sum-of-contigs
            Insert size: 155595; 14.1% error; agarose-fp
            Quality coverage: 6.85x in Q20 bases; sum-of-contigs Quality
            coverage: 8.13x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    23099: contig of 23099 bp in length

  TITLE     Direct Submission
  JOURNAL   Submitted (12-OCT-2000) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Mar 25, 2001 this sequence version replaced gi:10799449.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research
                Center code: WIBR
                Web site: http://www-seq.wi.mit.edu
                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L11327
                Center clone name: 314_C_19
            --------------.
            * NOTE: This record contains 85 individual
            * sequencing reads that have not been assembled into
            * contigs. Runs of N are used to separate the reads
            * and the order in which they appear is completely
            * arbitrary. Low-pass sequence sampling is useful for
            * identifying clones that may be gene-rich and allows
            * overlap relationships among clones to be deduced.
            * However, it should not be assumed that this clone
            * will be sequenced to completion. In the event that
            * the record is updated, the accession number will
            * be preserved.
            *        1      720: contig of 720 bp in length
            *      721      820: gap of 100 bp
            *      821     1557: contig of 737 bp in length
            *     1558     1657: gap of 100 bp

COMMENT     On Nov 8, 2001 this sequence version replaced gi:15638775.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0172J01
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the right is RP11-223M6, 200 bp overlap.
            Actual start of this clone is at base position 1 of RP11-172J1;
            actual end is at base position 33760 of RP11-223M6.

                 Center project name: esb
                 Center clone name: 160D07

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            -------------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 140151 bases at least Q40
                 Consensus quality: 140382 bases at least Q30
                 Consensus quality: 140426 bases at least Q20
                 Insert size: 132000; agarose-fp
                 Insert size: 140442; sum-of-contigs
                 Quality coverage: 11.84x in Q20 bases; agarose-fp
                 Quality coverage: 11.13x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1    60845: contig of 60845 bp in length
            *    60846    60945: gap of unknown length
            *    60946    99599: contig of 38654 bp in length
            *    99600    99699: gap of unknown length

                 3': RP11-804H15 AC104311
             --------------------
             Sequence Quality Assessment:
              This entry has been annotated with sequence quality
              estimates computed by the Phrap assembly program.
              All manually edited bases have been reduced to quality zero.
              Quality levels above 40 are expected to have less than
              1 error in 10,000 bp.
              Base-by-base quality values are not generally visible from the
              GenBank flat file format but are available as part
              of this entry's ASN.1 file.

             This sequence was finished as follows unless otherwise noted:
             all regions were either double-stranded or sequenced with an
             alternate chemistry or covered by high quality data (i.e., Phred
             quality >= 30); an attempt was made to resolve all sequencing
             problems, such as compressions and repeats; all regions were
             covered by at least one plasmid subclone or more than one M13
             subclone; and the assembly was confirmed by restriction digest.
             --------------------
             Sequence Validation:
              This sequence has been validated by Multiple Complete Digest
              fingerprinting. Comparison of the experimentally derived digest
              fragments with sequence-predicted fragments is given below.
              The electronically-digested sequence consists of both insert and
              vector, in order to accurately represent the entire circular BAC.
              Small fragments below a variable cutoff (approximately 400-800 bp)
              are not resolved in the fingerprint and hence do not appear
              in the table. There are no significant remaining discrepancies
              between the experimental and predicted values. Uniquely ordered
              fragments are separated by dashed lines.

RESULT 15
AC104311/c
LOCUS AC104311 185146 bp DNA linear HTG 21-JAN-2002
DEFINITION Homo sapiens chromosome UNK clone RP11-804H15, *** SEQUENCING IN PROGRESS ***, 45 unordered pieces.
ACCESSION AC104311
VERSION AC104311.2 GI:18252763
KEYWORDS HTG; HTGS_PHASE1.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 185146)
AUTHORS Waterston,R.H.
TITLE The sequence of Homo sapiens clone
JOURNAL Unpublished
REFERENCE 2 (bases 1 to 185146)
AUTHORS Waterston,R.H.
TITLE Direct Submission
JOURNAL Submitted (07-DEC-2001) Genome Sequencing Center, Washington University School of Medicine, 4444 Forest Park Parkway, St. Louis, MO 63108, USA
COMMENT On Jan 21, 2002 this sequence version replaced gi:17402818.

---------- Genome Center ----------
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site:http://genome.wustl.edu/gsc/index.shtml
---------- Project Information ----------
Center project name: H_NH0804H15
---------- Summary Statistics ----------

```
Sequencing vector: M13; 73%
Sequencing vector: plasmid; 27%
Chemistry: Dye-primer ET; 0% of reads
Chemistry: Dye-terminator Big Dye; 100% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 169877 bases at least Q40
Consensus quality: 173619 bases at least Q30
Consensus quality: 175935 bases at least Q20
-----------------------------------------------.
* NOTE: This is a 'working draft' sequence. It currently
* consists of 45 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
*        1     1178: contig of 1178 bp in length
*     1179     1278: gap of unknown length
*     1279     2877: contig of 1599 bp in length
*     2878     2977: gap of unknown length
*     2978     4291: contig of 1314 bp in length
*     4292     4391: gap of unknown length
*     4392     5675: contig of 1284 bp in length
*     5676     5775: gap of unknown length
*     5776     7129: contig of 1354 bp in length
*     7130     7229: gap of unknown length
*     7230     8368: contig of 1139 bp in length
*     8369     8468: gap of unknown length
*     8469    10108: contig of 1640 bp in length
*    10109    10208: gap of unknown length
*    10209    12010: contig of 1802 bp in length
*    12011    12110: gap of unknown length

            Consensus quality: 137509 bases at least Q20
            Estimated insert size: 194240; agarose-fp estimation
            Estimated insert size: 140738; sum-of-contigs estimation
            Quality coverage:  3.28 in Q20 bases; agarose-fp estimation
            Quality coverage:  4.53 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 22 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1225: contig of 1225 bp in length

            ------------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 8 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1371: contig of 1371 bp in length
            *     1372     1471: gap of unknown length
            *     1472     3143: contig of 1672 bp in length

COMMENT On Mar 30, 2001 this sequence version replaced gi:13375595.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

COMMENT     On Jul 3, 2001 this sequence version replaced gi:14165364.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0096E08
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-544H14, 2000 bp overlap;
            the clone sequenced to the right is RP11-33N4, 2000 bp overlap.
            Actual end of this clone is at base position 24907 of RP11-33N4.

            Data from AC080084 was used to finish RP11-96E8.

COMMENT   On Jan 9, 2002 this sequence version replaced gi:13431263.
          -------------- Genome Center
              Center: Washington University Genome Sequencing Center
              Center code: WUGSC
              Web site: http://genome.wustl.edu
              Contact: submissions@watson.wustl.edu
          -------------- Summary Statistics
              Center project name: H_NH0804P20
          --------------.

          NOTICE:

          This sequence was finished as follows unless otherwise noted:
          all regions were double stranded, sequenced with an alternate
          chemistry, or covered by high quality data (i.e., phred quality >=
          30); an attempt was made to resolve all sequencing problems, such
          as compressions and repeats; all regions were covered by sequence
          from more than one subclone; and the assembly was confirmed by
          restriction digest.

          MAPPING INFORMATION:
          Mapping information for this clone was provided by Dr. Wes Warren,
          Department of Genetics, Washington University, St. Louis MO. For
          additional information about the map position of this sequence, see
          http://genome.wustl.edu

          SOURCE INFORMATION:
          The RPCI-11 human BAC library was made from the blood of one male
          donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
          Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
          approach for construction of bacterial artificial chromosome
          libraries. Genomics 51:1-8. The clone may be obtained either from
          Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
          and coworkers at http://www.chori.org
          VECTOR:  pBACe3.6

          NEIGHBORING SEQUENCE INFORMATION:
          The clone sequenced to the left is RP11-299C5, 2000 bp overlap; the
          clone sequenced to the right is RP11-729M8.  Actual start of this
          clone is at base position 157736 of RP11-299C5; actual end is at
          base position 151367 of RP11-804P20.

          Data from  AC074375 and AC006038 was used to finish this clone,
          AC025750. Polymorphisms have been identified between AC025750 and
          AC074375. The sequence from 40567 to 41115, from 40991 to 41115 are
          covered only by pcr products from clone DNA. There is an unresolved
          homopolymeric runs between 39229 and 39243. There is an unresolved
          region between 132476 and 132479.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Nov 20, 2001 this sequence version replaced gi:16973843.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-420G9 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

            Grovemont Circle, Gaithersburg, MD 20877, USA
COMMENT     On Feb 21, 2003 this sequence version replaced gi:27476124.
            ---------- Genome Center
                 Center: NIH Intramural Sequencing Center
                 Center code: NISC
                 Web site: http://www.nisc.nih.gov
                 Contact: nisc_zoo@nhgri.nih.gov
            ---------- Project Information
                 Center project name: dtj
                 Center clone name: 126M05

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
            the sequence assembly is based on at least 8X average
            coverage in Q20 bases and has been reviewed to rule out
            gross misassemblies, the low-quality ends of sequence
            contigs have been trimmed away, and each base is associated
            with a Phrap-derived quality score.
            ---------- Summary Statistics
                 Sequencing vector: plasmid; n/a; 100% of reads
                 Chemistry: Dye-terminator Big Dye; 100% of reads
                 Assembly program: Phrap; version 0.990319
                 Consensus quality: 183092 bases at least Q40
                 Consensus quality: 183851 bases at least Q30
                 Consensus quality: 184434 bases at least Q20
                 Insert size: 160000; agarose-fp
                 Insert size: 184723; sum-of-contigs
                 Quality coverage: 14.13x in Q20 bases; agarose-fp
                 Quality coverage: 12.24x in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. Gaps between the contigs
            * are represented as runs of N. The order of the pieces
            * is believed to be correct as given, however the sizes
            * of the gaps between them are based on estimates that have
            * provided by the submittor.
            * This sequence will be replaced
            * by the finished sequence as soon as it is available and
            * the accession number will be preserved.
            *        1     9984: contig of 9984 bp in length
            *     9985    10084: gap of unknown length
            *    10085    49805: contig of 39721 bp in length
            *    49806    49905: gap of unknown length
            *    49906    66936: contig of 17031 bp in length
            *    66937    67036: gap of unknown length
            *    67037    83604: contig of 16568 bp in length
            *    83605    83704: gap of unknown length
            *    83705   108246: contig of 24542 bp in length
            *   108247   108346: gap of unknown length
            *   108347   112021: contig of 3675 bp in length
            *   112022   112121: gap of unknown length
            *   112122   134817: contig of 22696 bp in length
            *   134818   134917: gap of unknown length
            *   134918   147290: contig of 12373 bp in length
            *   147291   147390: gap of unknown length
            *   147391   185337: contig of 37947 bp in length
            *   185338   185437: gap of unknown length
            *   185438   185623: contig of 186 bp in length.

            -------------- Summary Statistics
                Center project name: H_NH0534K13
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
```

clone sections once, or longer because we provide a small overlap between neighboring data submissions.

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacpac.med.buffalo.edu)
VECTOR: pBACe3.6
NEIGHBORING SEQUENCE INFORMATION:
Actual start of this clone is at base position 1 of RP11-534K13; actual end is at base position 202317 of RP11-534K13.

            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Feb 25, 2003 this sequence version replaced gi:23957598.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht
            ml.

---------- Genome Center
Center: University of Washington Genome Center
Center Code: UWGC
Web site: http://www.genome.washington.edu
Contact: uwgchtgs@u.washington.edu
Drafting Center: BCM
---------- Project Information
Center project name: chr-3
Center clone name: RP11-72H11 (bc0191)
---------- Summary Statistics
Sequencing vector: M13; L08821; 49% of reads
Sequencing vector: plasmid; L08752; 51% of reads
Chemistry: Dye-terminator ET; 31% of reads
Chemistry: Dye-terminator Big Dye; 69% of reads
Assembly program: Phrap; version 0.990319
Consensus quality: 162937 bases at least Q40
Consensus quality: 162993 bases at least Q30
Consensus quality: 162997 bases at least Q20
Insert size: 189816; 14.3% error; agarose-fp
Insert size: 170535; sum-of-contigs
Quality coverage: 8.5x in Q20 bases; agarose-fp
Quality coverage: 9.5x in Q20 bases; sum-of-contigs
----------.
Overlapping Sequences:
5': Mapping in progress
3': RP11-782N4 (UWGC:bc0561) AC023231

Sequence Quality Assessment:
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., Phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest.

Sequence Validation:
This sequence has been validated by Multiple Complete Digest fingerprinting. Comparison of the experimentally derived digest fragments with sequence-predicted fragments is given below. The electronically-digested sequence consists of both insert and vector, in order to accurately represent the entire circular BAC. Small fragments below a variable cutoff (approximately 400-800 bp) are not resolved in the fingerprint and hence do not appear in the table. There are no significant remaining discrepancies between the experimental and predicted values. Uniquely ordered fragments are separated by dashed lines.

  TITLE   Direct Submission
  JOURNAL Submitted (27-FEB-2003) Whitehead Institute/MIT Center for Genome
          Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT   On Feb 27, 2003 this sequence version replaced gi:28173140.
          All repeats were identified using RepeatMasker:
          Smit, A.F.A. & Green, P. (1996-1997)

            Primer A: No sequence submitted
            Primer B: No sequence submitted
            STS size: 841
            Protocol:
            23,021,928 chimpanzee whole genome shotgun reads were aligned to
            the Human genome NCBI
            Build 34 (hg16,July 2003). Chimp WGS reads were from 9 donors,
            including Clint (Pan
            troglodytes verus), 3 other Pan troglodytes verus chimps
            (Donald,Karlien,Yvonne), 3 Pan
            troglodytes troglodytes chimps (Noemie,Masuku,Clara) and 2 chimps
            of unknown origin
            (Gon,Unknown Chimp). Common names:  Pan troglodytes verus is the
            western chimp and Pan
            troglodytes troglodytes is the central chimp. To be included in
            chimpanzee SNP discovery, a
            read must be at least 500bp in length, at least 50% of its base
            calls must have Phred
            score >= 20, at least 30% of its base calls must satisfy
            SNQS(30,25)(single strand NQS, the
            base in question has Phred score >= 30, the surrounding 10 bases in
            the read have Phred
            score >= 25), and the read must have at least 200 bp SNQS(30,25)
            bases. Reads not uniquely
            placed in the genome and read pairs whose two ends were not
            consistently placed were
            discarded. After above filtering, NQS(30,25) standard was applied
            to all pairs of
            overlapping reads to call NQS bases and SNPs. Alignments (between
            two reads) with less
            than 100 NQS bases or with SNP rate > 0.01 were discarded. To
            exclude alignment between two
            copies of a single read, comparisons between two reads that share
            95% of their genome
            alignments (>=95% bases of read A and >=95% bases of read B were
            placed at the same locus
            of human genome) were discarded.

LOCUS       AL359713              152966 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-95P3 on chromosome 6 Contains
            the 5' end of the RU2 gene, the MRS2L gene for MRS2-like magensium
            homeostasis factor, the 3' end of the GPLD1 gene for
            glycosylphosphatidylinositol specific phospholipase D1 and two CpG
            islands, complete sequence.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On May 3, 2001 this sequence version replaced gi:13446455.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr6
            RP11-95P3 is from the library RPCI-11.1 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6

            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

                Contact: sequence_submissions@genome.wi.mit.edu
            -------------- Project Information
                Center project name: L8843
                Center clone name: 672_I_2
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 149154 bases at least Q40
                Consensus quality: 154165 bases at least Q30
                Consensus quality: 156049 bases at least Q20
                Insert size: 195000; agarose-fp
                Insert size: 157491; sum-of-contigs
                Quality coverage: 4.2 in Q20 bases; agarose-fp
                Quality coverage: 5.2 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 20 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1373: contig of 1373 bp in length
            *     1374     1473: gap of 100 bp
            *     1474     3371: contig of 1898 bp in length
            *     3372     3471: gap of 100 bp
            *     3472     5991: contig of 2520 bp in length
            *     5992     6091: gap of 100 bp
            *     6092     8001: contig of 1910 bp in length
            *     8002     8101: gap of 100 bp
            *     8102    10452: contig of 2351 bp in length

            ---------- Genome Center ----------
            Center: Washington University Genome Sequencing Center
            Center code: WUGSC
            Web site:http://genome.wustl.edu/gsc/index.shtml
            ---------- Project Information ----------
            Center project name: H_NH0313B02
            ---------- Summary Statistics  ----------
            Sequencing vector: M13; %
            Sequencing vector: plasmid; %
            Chemistry: Dye-primer ET; % of reads
            Chemistry: Dye-terminator Big Dye; % of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 168786 bases at least Q40
            Consensus quality: 172458 bases at least Q30
            Consensus quality: 174496 bases at least Q20
            Insert size: 200000; agarose-fp
            Insert size: 178807; sum-of-contigs
            Quality coverage: 3.48 in Q20 bases; agarose-fp
            Quality coverage: 3.86 in Q20 bases; sum-of-contigs
            ----------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 20 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     2076: contig of 2076 bp in length
            *     2077     2176: gap of unknown length
            *     2177     4769: contig of 2593 bp in length
            *     4770     4869: gap of unknown length
            *     4870     7558: contig of 2689 bp in length
            *     7559     7658: gap of unknown length
            *     7659    10945: contig of 3287 bp in length
            *    10946    11045: gap of unknown length
            *    11046    13945: contig of 2900 bp in length

            ---------- Project Information
                 Center project name: eqq
                 Center clone name: 200A08

            The sequence data in this record represents an 'enhanced'
            version of a Phase 2 submission. Specifically, the indicated
            order and orientation of each sequence contig has been
            established using one or more of the following: read-pair
            data from individual subclones, overlaps with neighboring
            clones, alignment with available reference sequence (e.g.,
            human), and/or confirmation by PCR testing. In addition,
```

```
          the sequence assembly is generally based on at least 8X average
          coverage in Q20 bases and has been reviewed to rule out
          gross misassemblies, the low-quality ends of sequence
          contigs have been trimmed away, and each base is associated
          with a Phrap-derived quality score.
          ---------- Summary Statistics
               Sequencing vector: plasmid; n/a; 100% of reads
               Chemistry: Dye-terminator Big Dye; 100% of reads
               Assembly program: Phrap; version 0.990319
               Consensus quality: 246798 bases at least Q40
               Consensus quality: 247845 bases at least Q30
               Consensus quality: 248232 bases at least Q20
               Insert size: 212000; agarose-fp
               Insert size: 248348; sum-of-contigs
               Quality coverage: 8.53x in Q20 bases; agarose-fp
               Quality coverage: 7.28x in Q20 bases; sum-of-contigs
          ----------.
          * NOTE: This is a 'working draft' sequence. It currently
          * consists of 5 contigs. Gaps between the contigs
          * are represented as runs of N. The order of the pieces
          * is believed to be correct as given, however the sizes
          * of the gaps between them are based on estimates that have
          * provided by the submittor.
          * This sequence will be replaced
          * by the finished sequence as soon as it is available and
          * the accession number will be preserved.
          *        1    55010: contig of 55010 bp in length
          *    55011    55110: gap of unknown length
          *    55111    75860: contig of 20750 bp in length
          *    75861    75960: gap of unknown length
          *    75961    94951: contig of 18991 bp in length
          *    94952    95051: gap of unknown length
          *    95052   153305: contig of 58254 bp in length
          *   153306   153405: gap of unknown length
          *   153406   248748: contig of 95343 bp in length.

COMMENT     -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_DJ0167F23
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            This clone was provided for sequencing by Dr. Stephen Scherer,
            Department of Genetics, The Hospital for Sick Children, Toronto,
            Ontario, Canada, with support from the Canadian Genome Analysis and
            Technology Program; and Dr. John D. McPherson, Department of
            Genetics, Washington University, St. Louis MO. For additional
            information about the map position of this sequence, see
            http://www.genet.sickkids.on.ca/chromosome7 and
            http://genome.wustl.edu

            SOURCE INFORMATION:
            This clone was derived from human PAC library RPCI-1, prepared by
            Pieter de Jong and coworkers at http://www.chori.org using the
            method described by Ioannou et al., Nature Genetics 6:84-9 (1994).
            The library is from one male donor.
            The clone may be obtained either from Genome Systems, Inc.
            (http://www.genomesystems.com) or Research Genetics, Inc.
            (http://www.resgen.com); or from Pieter de Jong.
            VECTOR:  pCYPAC2

            NEIGHBORING SEQUENCE INFORMATION:
            The actual start of this clone is at base position 1 of RP1-167F23
            the actual end is at base position 102717 of RP1-167F23. The
            orientation of this clone is unknown.

            Center code: WUGSC
            Web site:http://genome.wustl.edu/gsc/index.shtml
            -------------- Project Information --------------
            Center project name: H_TD2594L23
            -------------- Summary Statistics  --------------
            Sequencing vector: M13; 95%
            Sequencing vector: plasmid; 5%
            Chemistry: Dye-primer ET; 95% of reads
            Chemistry: Dye-terminator Big Dye; 5% of reads
            Assembly program: Phrap; version 0.990319
            Consensus quality: 154148 bases at least Q40
            Consensus quality: 162306 bases at least Q30
            Consensus quality: 166493 bases at least Q20
            Insert size: 191000; agarose-fp
            Insert size: 174259; sum-of-contigs
            Quality coverage: 3.14 in Q20 bases; agarose-fp
            Quality coverage: 3.53 in Q20 bases; sum-of-contigs
            ------------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 43 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1135: contig of 1135 bp in length
            *     1136     1235: gap of unknown length
            *     1236     2532: contig of 1297 bp in length
            *     2533     2632: gap of unknown length

LOCUS       AL136365              179006 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-143M15 on chromosome 9p23-24.3
            Contains the DMRT1 gene for doublesex and mab-3 related
            transcription factor 1, the DMRT3 gene for doublesex and mab-3
            related transcription factor 3 and four CpG islands, complete
            sequence.
ACCESSION   AL136365
VERSION     AL136365.9  GI:8246868
KEYWORDS    HTG; CpG island; DMRT1; DMRT3; doublesex; mab-3.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jun 4, 2000 this sequence version replaced gi:7801526.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 9, constructed by the Sanger Centre Chromosome 9 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr9
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            RP11-143M15 is from the library RPCI-11.1 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
```

```
          one subclone; and the assembly was confirmed by restriction digest,
          except on the rare occasion of the clone being a YAC.

  AUTHORS   Barlow,K.
  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Oct 7, 1999 this sequence version replaced gi:6002138.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 20, constructed by the Sanger Centre Chromosome 20
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr20
            RP4-568C11 is from the library RPCI-4 constructed by the group of
            Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pCYPAC2
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

  TITLE     Direct Submission
  JOURNAL   Submitted (29-JUN-2002) Human Genome Sequencing Center, Department
            of Molecular and Human Genetics, Baylor College of Medicine, One
            Baylor Plaza, Houston, TX 77030, USA
COMMENT     On Mar 1, 2002 this sequence version replaced gi:18652479.
            INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email
            gc-help@bcm.tmc.edu

            CLONE LENGTH: This sequence does not necessarily represent the
            entire insert of this clone. Overlapping regions of clones are only
            sequenced and submitted once, so the sequence for the remainder of
            the insert may be found in the record for the adjacent clones.
            Overlapping clones are noted at the beginning and end of the
            Features listing.

            ANNOTATION OF FEATURES:
               STSs are identified using ePCR (Genome Res. 7:541-550) searches
            of a local database that includes entries from dbSTS, GDB, and
            local mapping efforts.
               Repeats are identified using RepeatMasker (A. Smit and P. Green,
            unpublished.) for Human and Mouse sequences.
               Genes and Region of sequence similarity are identified by BLAST
            (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the
            EST and cDNA sequences. Genes demonstrate at least two exons
            flanked by consensus splice sites that maintained sequence
            continuity across the splice junctions. Sequences that are not
            identical matches are annotated as similar.

            SEQUENCING READ COVERAGE:Sequencing is completed to a minimum
            standard of double strand coverage with a minimum of 2 clones and 2
            reads with no ambiguities or 2 chemistries with a minimum of 2
            clones and 3 reads with no ambiguities. If the sequence quality for
            a region does not meet this standard, it will be indicated in the
            annotation as Low Coverage.

            QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality
            standards - estimated error rate less than 1 per 10,000 bases.
            Reports of lowest quality individual bases and measures of base
            quality are listed below. Description of the metrics can be found
            at URL:
            http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

            -----------------------------------------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 9 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1599: contig of 1599 bp in length
            *     1600     1699: gap of unknown length
            *     1700     3234: contig of 1535 bp in length

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PS Claim 8; Fig 6; 540pp; English.
XX
CC The present sequence represents the HC-contig derived from normal human
CC chromosome 10, 10q25.2 region. This region can be naturally mutated to
CC produce an unusual chromosomal marker referred to as mardel(10). The
CC mardel(10) marker is mitotically stable and contains a functional
CC neocentromere at a location regarded as non-centromeric. This
CC neocentromere maps to q25.2 on chromosome 10. The specification describes
CC nucleic acid sequences derived from a eukaryotic chromosome, including a
CC neocentromere or its functional derivative or hybrid, that are able, in a
CC compatible cell, of replicating, acting as extra-chromosomal element and
CC segregating during cell division. The sequences can be used to construct
CC artificial chromosomes for use in gene therapy comprising a replicable,
CC segregating nucleic acid that confers a specific phenotype on cells.
CC Human artificial chromosomes can propagate in human cells and carry large
CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC they are not mutagenic. The artificial chromosomes are also useful for
CC generation of transgenic plants and animals, in production of proteins
CC and to make diagnostic reagents, e.g. for expression of cytokines,
CC receptors and growth factors, or to increase the copy number of a gene in
CC a cell. The constructs may also be used for functional and structural
CC analysis of chromosomes

PT   New isolated nucleic acid comprising neocentromere sequences from
PT   eukaryotic chromosome - used to produce replicable, segregating
PT   artificial chromosomes that can carry large amounts of DNA for gene
PT   therapy.
XX
PS   Claim 9; Fig 16A; 540pp; English.
XX
CC   The present sequence represents the NC-contig derived from a mutated
CC   human chromosome 10, 10q25.2 region. The sequence contains an unusual
CC   chromosomal marker referred to as mardel(10). The mardel(10) marker is
CC   mitotically stable and contains a functional neocentromere at a location
CC   regarded as non-centromeric. This neocentromere maps to q25.2 on
CC   chromosome 10. The specification describes nucleic acid sequences derived
CC   from a eukaryotic chromosome, including a neocentromere or its functional
CC   derivative or hybrid, that are able, in a compatible cell, of
CC   replicating, acting as extra-chromosomal element and segregating during
CC   cell division. The sequences can be used to construct artificial
CC   chromosomes for use in gene therapy comprising a replicable, segregating
CC   nucleic acid that confers a specific phenotype on cells. Human artificial
CC   chromosomes can propagate in human cells and carry large amounts of DNA
CC   (e.g. therapeutic genes), and, being extra-chromosomal, they are not
CC   mutagenic. The artificial chromosomes are also useful for generation of
CC   transgenic plants and animals, in production of proteins and to make
CC   diagnostic reagents, e.g. for expression of cytokines, receptors and
CC   growth factors, or to increase the copy number of a gene in a cell. The
CC   constructs may also be used for functional and structural analysis of
CC   chromosomes

PT   An isolated or purified human kinesin-like protein (HKLP) encoding
PT   polynucleotide used to detect HKLP polynucleotides in a sample comprises
PT   a contiguous span of at least 12 nucleotides.
XX
PS   Claim 1; Page 143-175; 199pp; English.
XX
CC   The present invention describes the coding and protein sequences of the
CC   human kinesin-like protein HKLP. It is thought that the protein could be
CC   involved in neurological disorders, infertility, spontaneous abortion,
CC   neonatal chromosome disorders, aneuploidy and cancers. This is due to its
CC   function in the movement of microtubules. The protein shows homology to
CC   the murine KIF1A and KIF1B proteins. The sequences disclosed in the
CC   invention can be used in the isolation of similar human proteins and in
CC   vector production. In addition, the biallelic markers shown can be used
CC   in disease diagnosis and population studies

PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 199; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PS   Example 2; Fig 1; 245pp; English.
XX
CC   The invention relates to a novel isolated peptide comprising or
CC   consisting of an amino acid sequence selected from an amino acid sequence
CC   of a variant oestrogen receptor protein (e.g. ERbeta), or a fragment of
CC   10 amino acids), antibodies against them, nucleic acids encoding them
CC   (including vectors for transforming cells). The gene for human ERbeta is
CC   located on chromosome 6q.25.1. The variants are encoded by single
CC   nucleotide polymorphisms (SNP). The variant peptides and proteins can be
CC   used in assays to determine the biological activity of the protein, to
CC   raise antibodies, as a reagent in assays designed to quantitatively
CC   determine levels of the protein in biological fluids, to identify
CC   compounds that modulate receptor activity and to screen compounds for the
CC   ability to stimulate or inhibit interaction between the receptor protein
CC   and a target molecule that normally interacts with the receptor protein
CC   e.g. oestrogen. The antibody can be used to isolate the protein, to
CC   assess expression in disease states e.g. cardiovascular disease and
CC   autoimmune disease (e.g. systemic lupus erythematosus, arthritis,
CC   rheumatism and osteoarthritis), osteoporosis, breast cancer and
CC   endometrial cancer. In addition the antibodies can be used in
CC   pharmacogenomic analysis and inhibiting protein function, e.g. blocking
CC   the binding of the oestrogen receptor protein to a binding partner such
CC   as a ligand. The nucleic acids encoding the proteins can be used as
CC   probes, primers, chemical intermediates and in biological assays. The
CC   present sequence is the human ERbeta gene

PT associated with HKR1, such as hyperproliferative disorder, e.g. lung,
PT brain or breast cancer.
XX
PS Example 15; Page 82-88; 105pp; English.
XX
CC The present invention describes a compound 8-50 nucleobases in length
CC targeted to, and which specifically hybridises with a nucleic acid
CC molecule encoding HKR1, and inhibits the expression of HKR1. Also
CC described: (1) a compound 8-50 nucleobases in length that specifically
CC hybridises with at least an 8-nucleobase portion of an active site on a
CC nucleic acid molecule encoding HKR1; (2) a composition comprising the
CC compound and a carrier or diluent; (3) a method for inhibiting the
CC expression of HKR1 in cells or tissues by contacting the cells or tissues
CC with the compound so that expression of HKR1 is inhibited; and (4) a
CC method of treating an animal having a disease or condition associated
CC with HKR1 by administering to the animal a therapeutic or prophylactic
CC amount of the compound so that expression of HKR1 is inhibited. HKR1
CC antisense oligonucleotides have cytostatic activities and can be used as
CC HKR1 inhibitors. The compound, composition and methods are useful for
CC treating a disease or condition associated with HKR1, such as a
CC hyperproliferative disorder, e.g. lung, brain or breast cancer, by
CC inhibiting the expression of HKR1. They are also useful in research and
CC diagnostics for modulating the expression of HKR1. The present sequence
CC represents a human HKR1 related DNA sequence, which is used in an example
CC from the present invention

PT Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT comprises a nucleotide sequence.
XX
PS Claim 1; SEQ ID NO 814; 0pp; English.
XX
CC The present invention relates to novel DNA and protein sequences which
CC are associated with carcinomas. The sequences are useful for: (i) for
CC screening drug candidates; (ii) for screening of bioactive agent capable
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of

```
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   New polynucleotide, useful for preparing a composition for treating a
PT   patient in need of increased or suppressed activity or expression of the
PT   guanosine triphosphate-binding protein coupled receptor.
XX
PS   Claim 1; SEQ ID NO 1789; 28pp; English.
XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

XX
CC The present invention relates to the isolation of novel human enzyme
CC polypeptides (AAU22915-AAU23814), and the cDNA and genomic sequences
CC encoding them. The enzyme polypeptides of the invention may comprise the
CC functional classes of oxidoreductases, transferases, hydrolases, lyases,
CC isomerases or ligases. The sequences of the invention are useful in the
CC diagnosis, treatment, prevention and/or prognosis of a wide range of
CC disorders including hyperproliferative disorders (e.g. cancer),
CC immunodeficiency disorders (e.g. AIDS) autoimmune disorders (e.g.
CC arthritis), neurological disorders (e.g. Alzheimer's disease), metabolic
CC disorders (e.g. phenylketonuria), inflammatory disorders (e.g. asthma),
CC cardiovascular disorders (e.g. atherosclerosis), blood-related disorders
CC (e.g. haemophilia), reproductive disorders (e.g. infertility) and
CC infectious disorders (e.g. Influenza). The polynucleotides of the
CC invention can also be used in gene therapy. AAS41685-AAS42192 represent
CC DNA sequences encoding for the novel human enzyme polypeptides of the
CC invention. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Barash SC, Ruben SM;
XX
DR WPI; 2001-476161/51.
XX
PT Isolated nucleic acid molecule encoding an inflammation-associated
PT polypeptide is used in preventing, treating or ameliorating a medical
PT condition.
XX
PS Disclosure; SEQ ID NO 899; 859pp + Sequence Listing; English.
XX
CC The present invention provides human cDNAs, proteins and related genomic
CC DNAs. These can be used in the treatment of neural, immune system,
CC muscular, reproductive, gastrointestinal, pulmonary, cardiovascular,
CC renal and proliferative disorders and inflammation. The present sequence
CC is a genomic DNA of the invention

PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Barash SC, Ruben SM;
XX
DR WPI; 2001-451936/48.
XX
PT Isolated polypeptide for treating, preventing and/ or prognosing
PT disorders of the endocrine system such as reproductive disorders,
PT endocrine cancers and also for testing and detection e.g. diagnosis.
XX
PS Claim 1; SEQ ID NO 469; 604pp; English.
XX
CC Sequences AAS29737-AAS29769 represent genomic DNA molecules, which encode
CC the endocrine polypeptides of the invention. Endocrine polypeptides and
CC their associated polynucleotides of the invention are useful in the
CC diagnosis, treatment and prevention of various types of disorders in e.g.
CC humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A
CC pathological condition can be determined by determining the presence or
CC absence of a mutation in an endocrine polynucleotide. The treatable
CC disorders include autoimmune diseases such as rheumatoid arthritis,
CC hyperproliferative disorders such as neoplasms of the breast or liver,
CC cardiovascular disorders such as cardiac arrest, cerebrovascular
CC disorders such as cerebral ischaemia, nervous system disorders such as
CC Alzheimer's disease, infections caused by bacteria, viruses and fungi,
CC ocular disorders such as corneal infection, endocrine disorders such as
CC premature labour and infertility, gastrointestinal disorders such as
CC Crohn's disease, renal disorders such as glomerulonephritis and
CC respiratory disorders such as asthma. The polypeptides can also be used
CC to aid wound healing, to prevent skin aging due to sunburn, to maintain
CC organs before transplantation, to regenerate tissues and in chemotaxis.
CC The polypeptides can also be used as a food additive or preservative to
CC increase or decrease storage capabilities. Note: The sequence data for
CC this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from WIPO at
CC ftp.wipo.int/pub/published_pct_sequences

PT treatment of immune, hyperproliferative, renal, respiratory,
PT cardiovascular, reproductive, endocrine, gastrointestinal and
PT neurological disorders.
XX
PS Disclosure; SEQ ID NO 899; 369pp + Sequence Listing; English.
XX
CC The invention relates to novel genes (ABV83682-ABV84101) and proteins
CC (ABP66710-ABP67129) useful for preventing, treating or ameliorating
CC medical conditions e.g. by protein or gene therapy. The genes are
CC isolated from a range of human tissues disclosed in the specification.
CC The nucleic acids, proteins, antibodies and (ant)agonists are useful in
CC the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
CC ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
CC breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
CC disorders e.g. Addison's disease, allergies, autoimmune haemolytic
CC anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
CC multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
CC cardiovascular disorders such as myocardial ischaemias; (d) wound healing
CC ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
CC infectious diseases such as viral, bacterial, fungal and parasitic
CC infections. Note: The sequence data for this patent did not form part of
CC the printed specification, but was obtained in electronic format directly
CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

PT   Determining a predisposition for or the occurrence of neurodegenerative
PT   disease, e.g. Alzheimer's disease by detecting in a target nucleic acid
PT   the presence or absence of an allelic variant of one or more polymorphic
PT   regions.
XX
```

PS Claim 9; Page 584-page 618; 848pp; English.
XX
CC The present invention relates to a method (M1) for determining a
CC predisposition for or the occurrence of neurodegenerative disease in a
CC subject. The method comprises detecting in a target nucleic acid obtained
CC from the subject the presence or absence of an allelic variant of one or
CC more polymorphic regions of one or more genes selected from uPA
CC (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulin-
CC degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
CC lypase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
CC presence of at least one of the allelic variant of one or more
CC polymorphic regions is indicative of a predisposition for or the
CC occurrence of neurodegenerative disease. The genes are all located on
CC chromosome 10. M1 is useful for determining a predisposition for or the
CC occurrence of, and for treating neurodegenerative disease, particularly
CC Alzheimer's disease.

PT   Determining a predisposition for or the occurrence of neurodegenerative
PT   disease, particularly Alzheimer's disease, comprises determining the
PT   presence of a polymorphism in the uPA, SNCG, IDE, KNSL1, LIPA or TNFRSF6
PT   gene.
XX
PS   Claim 22; SEQ ID NO 186; 205pp; English.
XX
CC   This invention relates to a novel method of determining a predisposition
CC   for or the occurrence of neurodegenerative disease comprising detecting
CC   in a target nucleic acid obtained from the subject the presence of an
CC   allelic variant of polymorphic regions of human genes selected from
CC   urokinase plasminogen activator (uPA), gamma-synuclein (SNCG), insulin
CC   degrading enzyme (IDE), kinesin-like protein 1 (KNSL1), lysosomal acid
CC   lipase (LIPA) and tumour necrosis factor receptor SF6 (TNFRSF6). The
CC   method is useful in determining the presence or predisposition to a
CC   neurodegenerative disease, particularly Alzheimer's disease. The present
CC   sequence is that of the human IDE gene which is related to the invention.

CC   from the subject the presence or absence of an allelic variant of one or
CC   more polymorphic regions of one or more genes selected from uPA
CC   (Urokinase plasminogen activator), SNCG (gamma-synuclein), IDE (insulin-
CC   degrading enzyme), KNSL1 (Kinesin-like protein 1), LIPA (lysosomal acid
CC   lypase), and TNFRSF6 (Tumour Necrosis Factor Receptor-SF6), where the
CC   presence of at least one of the allelic variant of one or more
CC   polymorphic regions is indicative of a predisposition for or the
CC   occurrence of neurodegenerative disease. The genes are all located on
CC   chromosome 10. M1 is useful for determining a predisposition for or the
CC   occurrence of, and for treating neurodegenerative disease, particularly
CC   Alzheimer's disease.

PT Determining a predisposition for or the occurrence of neurodegenerative
PT disease, particularly Alzheimer's disease, comprises determining the
PT presence of a polymorphism in the uPA, SNCG, IDE, KNSL1, LIPA or TNFRSF6
PT gene.
XX
PS Claim 9; SEQ ID NO 484; 205pp; English.
XX
CC This invention relates to a novel method of determining a predisposition
CC for or the occurrence of neurodegenerative disease comprising detecting
CC in a target nucleic acid obtained from the subject the presence of an
CC allelic variant of polymorphic regions of human genes selected from
CC urokinase plasminogen activator (uPA), gamma-synuclein (SNCG), insulin
CC degrading enzyme (IDE), kinesin-like protein 1 (KNSL1), lysosomal acid
CC lipase (LIPA) and tumour necrosis factor receptor SF6 (TNFRSF6). The
CC method is useful in determining the presence or predisposition to a
CC neurodegenerative disease, particularly Alzheimer's disease. The present
CC sequence is that of a region of human DNA, containing the human IDE and
CC KNSL1 genes, which is related to the invention.

PT   New peptides related to calcium channel transporter subfamily, useful for
PT   treating disorders associated with abnormal expression of the transporter
PT   in liver, adrenal gland, normal and tumorous nervous tissues, placenta,
PT   or kidney.
XX
PS   Claim 22; Fig 3; 193pp; English.
XX
CC   The invention relates to an isolated peptide (a member of the calcium
CC   channel transporter family) appearing as ABG74119 (or an allelic variant,
CC   orthologue or fragment of at least 10 contiguous amino acids), which is
CC   encoded by a nucleic acid molecule that hybridises under stringent
CC   conditions to the opposite strand of the cDNA and genomic DNA appearing
CC   as ABX16033 and ABX16034 (including their complement or a sequence 80%
CC   similar to them). Also included are antibodies, vectors, host cells, gene
CC   chips, transgenic non-human animals and identification of modulators and
CC   binding agents. The peptides are useful in substantial and specific
CC   assays related to functional information of the peptide sequences, to
CC   raise antibodies or to elicit immune response, as reagents in assays to

DR   WPI; 2004-441208/41.
XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 2837; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PT   Judging relative onset risk of diabetes including type I or II diabetes
PT   and renopathy with or without type II diabetes accompanying, by detecting
PT   haplotype with gene polymorphism from human genomic DNA.
XX
PS   Claim 1; SEQ ID NO 22; 157pp; Japanese.
XX
CC   The invention relates to a method of judging the onset risk of diabetes
CC   comprising detecting a haplotype consisting of gene polymorphism at 1 or
CC   more positions selected from (a)-(h) from a specimen containing human
CC   genomic DNA supplied by a patient: (a) the nucleotide located at position
CC   36 of the intron 1 on GFAT1 (glutamine:fructose-6-phosphate amide
CC   transferase 1) gene (nucleotide number 632 in sequence ADD71329; (b) the
CC   nucleotide located at position 7 of the intron 11 on GFAT1 gene
CC   (nucleotide number 266 in sequence ADD71330; (c) the nucleotide located
CC   at position -147 of the intron 12 on GFAT1 gene (nucleotide number 338 in
CC   sequence ADD71331; (d) the nucleotide located at positions 1853-1877 of
CC   the intron 8 on GFAT1 gene (nucleotide numbers 336-360 in sequence
CC   ADD71332; (e) the nucleotide located at positions 1988-2007 of the intron
CC   12 on GFAT1 gene (nucleotide numbers 328-347 in sequence ADD71333; (f)
CC   the nucleotide located at position -11 to -22 of the intron 18 on GFAT1
CC   gene (nucleotide numbers 253-264 in sequence ADD71334; (g) the nucleotide
CC   located at positions 2632-2661 of the intron 3 on GFAT1 gene (nucleotide
CC   numbers 237-266 in sequence ADD71335; and (h) the nucleotide located at
CC   position 66 of the intron 18 on GFAT2 gene (nucleotide number 225 in
CC   sequence ADD71351). The method is useful for judging relative onset risk
CC   of diabetes including type I or II diabetes and renopathy with or without
CC   type II diabetes accompanying. This sequence represents the GFAT1 genomic
CC   sequence containing the polymorphisms shown above.

PT   Nucleic acid array useful for detecting cancer associated nucleic acid,
PT   comprises two or more nucleic acid probes.
XX
PS   Disclosure; SEQ ID NO 966; 198pp; English.
XX
CC   The invention relates to a nucleic acid array for detecting a cancer
CC   associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC   The invention also relates to a peptide array comprising two or more
CC   isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC   that binds to a polypeptide, an isolated antibody or its fragment which
CC   binds to a polypeptide, which is prepared by immunizing a host animal
CC   with a composition comprising the polypeptide or its antigen binding
CC   fragment and collecting cells from the host expressing antibodies against
CC   the antigen or its antigen binding fragment, a composition comprising the
CC   antibody and a carrier, a method of screening for anticancer activity, a
CC   method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC   method of treating cancer and a method of inhibiting expression of a CA
CC   nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC   nucleic acids. The antibody is useful for detecting the presence or
CC   absence of cancer cells in an individual which involves contacting cells
CC   from the individual with the antibody and detecting a complex of a CA
CC   protein from the cancer cells and the antibody, where the detection of
CC   the complex correlates with the presence of cancer cells in the
CC   individual. The composition is useful for inhibiting growth of cancer
CC   cells in an individual or for delivering a therapeutic agent to cancer
CC   cells in an individual. The invention is also useful for diagnosing
CC   cancer, for treating cancer and for inhibiting expression of a CA gene in
CC   a cell. This sequence represents human cancer-associated genomic DNA of
CC   the invention.

XX
CC   The invention relates to a novel polynucleotide encoding a guanosine
CC   triphosphate-binding protein coupled receptor (GPCR). A polynucleotide of
CC   the invention may have a use in gene therapy. The polynucleotide and
CC   polypeptide are useful for preparing a composition for treating a patient
CC   in need of increased or suppressed activity or expression of the
CC   guanosine triphosphate-binding protein coupled receptor. The
CC   polynucleotide sequences shown in ADC85548-ADC87616 encode GPCR's of the
CC   invention.

PT   Identifying a subject at risk of melanoma by detecting presence or
PT   absence of a polymorphic variation associated with melanoma, where the
PT   presence of polymorphic variations is indicative of the subject being at
PT   risk of melanoma.
XX
PS   Example 21; SEQ ID NO 2; 418pp; English.
XX
CC   The invention relates to a novel method for identifying a subject at risk
CC   of melanoma. The method comprises detecting the presence or absence of a
CC   polymorphic variation associated with melanoma, where the presence of the
CC   one or more polymorphic variations is indicative of the subject being at
CC   risk of melanoma. The invention further comprises: a method for
CC   identifying a polymorphic variation associated with melanoma proximal to
CC   an incident polymorphic variation associated with melanoma; an isolated
CC   nucleic acid which comprises a portion of or all of a nucleotide sequence
CC   comprising fully defined 68400-213300 base pairs sequences (SEQ ID NO. 3,
CC   4, 5, 6, and/or 7) given in the specification, and comprises one or more
CC   polymorphic variations; an oligonucleotide comprising a nucleotide
CC   sequence complementary to a portion of the nucleotide sequence above,
CC   where the 3' end of the oligonucleotide is adjacent to a polymorphic
CC   variation; a microarray comprising the isolated nucleic acid linked to a
CC   solid support; an isolated polypeptide encoded by the isolated nucleic
CC   acid sequence; genotyping a nucleic acid; a method for identifying a
CC   candidate molecule that modulates cell proliferation; treating melanoma
CC   in a subject; and treating melanoma in a subject or preventing melanoma
CC   in a subject. The methods and sequences have cytostatic activity. The
CC   polynucleotides may be used in gene therapy. The methods are useful for
CC   identifying a subject at risk of melanoma, treating melanoma in a
CC   subject, or preventing melanoma in a subject. This polynucleotide
CC   sequence represents the polymorphic variation containing human nidogen 2
CC   (NID2) genomic DNA of the invention.

XX
PT   Early detection of soft tissue sarcoma comprises determining expression
PT   of a gene in a first soft tissue sample and a normal soft tissue sample
PT   and comparing the gene expression, also useful in treating soft tissue
PT   sarcoma.
XX
PS   Example 2; SEQ ID NO 146; 210pp; English.
XX
CC   The invention relates to a novel method for detecting soft tissue sarcoma
CC   which comprises obtaining a first soft tissue sample from an individual
CC   and a normal soft tissue sample from the same or different individual,
CC   determining the expression of a gene in both samples and comparing the
CC   expression of the gene in both soft tissue samples, where a higher level
CC   of protein expression in the first soft tissue sample indicates the
CC   presence of soft tissue sarcoma. The method of the invention has
CC   cytostatic applications and may be useful for detecting soft tissue
CC   sarcoma, possibly via gene therapy or vaccine production. The nucleic
CC   acid sequences may be useful in diagnostic and screening applications.
CC   The current sequence is that of a human soft tissue sarcoma-upregulated
CC   DNA of the invention. The current sequence is not shown within the
CC   specification per se but was submitted in CD format by the inventor.

PA (HUMA-) HUMAN GENOME SCI INC.
XX
PI Rosen CA, Barash SC, Ruben SM;
XX
DR WPI; 2001-465570/50.
XX
PT Isolated nucleic acid molecule encoding a reproductive system antigen is
PT used in preventing, treating or ameliorating a medical condition.
XX
PS Disclosure; SEQ ID NO 7456; 1297pp + Sequence Listing; English.
XX
CC The present invention provides the protein and coding sequences of a

```
CC   number of human reproductive system related antigens. These can be used
CC   in the prevention and treatment of reproductive system disorders,
CC   including cancer. The present sequence is a genomic sequence encoding a
CC   protein of the invention

XX
CC   The present invention provides the protein and coding sequences of 973
CC   human testicular antigens, and fragments of their genomic sequences. The
CC   sequences can be used in the treatment of cardiovascular, urinary system,
CC   reproductive system, immune, respiratory, neurological and
CC   gastrointestinal disorders, infections, and particularly cancer,
CC   especially testicular cancers. The present sequence is a DNA encoding a
CC   protein fragment of the invention

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 922; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT Nucleic acid array useful for detecting cancer associated nucleic acid,
PT comprises two or more nucleic acid probes.
XX
PS Disclosure; SEQ ID NO 499; 198pp; English.
XX
CC The invention relates to a nucleic acid array for detecting a cancer
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC The invention also relates to a peptide array comprising two or more
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC that binds to a polypeptide, an isolated antibody or its fragment which
CC binds to a polypeptide, which is prepared by immunizing a host animal
CC with a composition comprising the polypeptide or its antigen binding
CC fragment and collecting cells from the host expressing antibodies against
CC the antigen or its antigen binding fragment, a composition comprising the
CC antibody and a carrier, a method of screening for anticancer activity, a
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC method of treating cancer and a method of inhibiting expression of a CA
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC nucleic acids. The antibody is useful for detecting the presence or
CC absence of cancer cells in an individual which involves contacting cells
CC from the individual with the antibody and detecting a complex of a CA
CC protein from the cancer cells and the antibody, where the detection of
CC the complex correlates with the presence of cancer cells in the
CC individual. The composition is useful for inhibiting growth of cancer
CC cells in an individual or for delivering a therapeutic agent to cancer
CC cells in an individual. The invention is also useful for diagnosing
CC cancer, for treating cancer and for inhibiting expression of a CA gene in
CC a cell. This sequence represents human cancer-associated genomic DNA of
CC the invention.

XX
PT Isolated nucleic acid molecule encoding a reproductive system antigen is
PT used in preventing, treating or ameliorating a medical condition.
XX
PS Disclosure; SEQ ID NO 8396; 1297pp + Sequence Listing; English.
XX
CC The present invention provides the protein and coding sequences of a
CC number of human reproductive system related antigens. These can be used
CC in the prevention and treatment of reproductive system disorders,
CC including cancer. The present sequence is a genomic sequence encoding a
CC protein of the invention

XX
CC   The present invention relates to cancer associated sequences (ADQ97025-
CC   ADQ98004). The sequences are useful for the diagnosis, prevention and/or
CC   treatment of cancer, such as leukemia and lymphoma. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic formate directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

XX
PT   Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT   useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS   Disclosure; SEQ ID NO 23387; 3071pp + Sequence Listing; English.
XX
CC   AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC   amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC   activity, and can be used in gene therapy and vaccine production. (I)
CC   proteins and polynucleotides may be used in the prevention, diagnosis and
CC   treatment of diseases associated with inappropriate (I) expression. For
CC   example, they may be used to treat disorders associated with decreased
CC   expression by rectifying mutations or deletions in a patient's genome
CC   that affect the activity of (I) by expressing inactive proteins or to
CC   supplement the patients own production of (I). Additionally, (I)
CC   polynucleotides may be used to produce the secreted (I), by inserting the
CC   nucleic acids into a host cell and culturing the cell to express the
CC   protein. (I) proteins and polynucleotides may be used to prevent,
CC   diagnose and treat immune/haematopoietic-related diseases, especially
CC   cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC   to AAK87694 represent human immune/haematopoietic antigen genomic
CC   sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC   represent sequences used in the exemplification of the present invention

XX
PT Nucleic acids encoding human immune/hematopoietic antigen polypeptides,
PT useful for preventing, diagnosing and/or treating cancers and metastasis.
XX
PS Disclosure; SEQ ID NO 23303; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT   New isolated cancer associated nucleic acids comprising at least 10
PT   contiguous nucleotides, useful for diagnosing, preventing and/or treating
PT   cancers such as leukemia and lymphoma.
XX
PS   Claim 1; SEQ ID NO 937; 199pp; English.
XX
CC   The present invention relates to cancer associated sequences (ADQ97025-
```

```
CC   ADQ98004). The sequences are useful for the diagnosis, prevention and/or
CC   treatment of cancer, such as leukemia and lymphoma. Note: The sequence
CC   data for this patent did not form part of the printed specification, but
CC   was obtained in electronic formate directly from WIPO at
CC   ftp.wipo.int/pub/published_pct_sequences.

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 460; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   Novel human cancer associated protein encoded within open reading frame
PT   of cancer associated gene, useful as targets for diagnosing cancer.
XX
PS   Claim 16; SEQ ID NO 462; 182pp; English.
XX
CC   The invention relates to cancer-associated proteins (CAP) and the cancer-
CC   associated (CA) nucleic acids encoding them. The invention also relates
CC   to a method for treating cancers involving administering to a patient an
CC   inhibitor of CAP, and a method of screening for anticancer activity in a
CC   potential drug involving providing a cell that expresses a CA gene,
CC   contacting a tissue sample derived from a cancer cell with an anticancer
CC   drug candidate and monitoring the effect of the anticancer drug candidate
CC   on expression of the CA gene. The CAP proteins are useful for detecting
CC   cancer associated with expression of a CAP protein in a test cell sample
CC   and for screening for a bioactive agent capable of modulating the
CC   activity of a CAP protein. The CA nucleic acids are useful for diagnosing
CC   cancer, involving determining the expression of a CA nucleic acid in a
CC   tissue. This sequence represents a human CA gene of the invention. Note:
CC   The sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PS Disclosure; SEQ ID NO 25558; 3071pp + Sequence Listing; English.
XX
CC AAK54951 to AAK64702 encode the human immune/haematopoietic antigen (I)
CC amino acid sequences given in AAM82170 to AAM91921. (I) have cytostatic
CC activity, and can be used in gene therapy and vaccine production. (I)
CC proteins and polynucleotides may be used in the prevention, diagnosis and
CC treatment of diseases associated with inappropriate (I) expression. For
CC example, they may be used to treat disorders associated with decreased
CC expression by rectifying mutations or deletions in a patient's genome
CC that affect the activity of (I) by expressing inactive proteins or to
CC supplement the patients own production of (I). Additionally, (I)
CC polynucleotides may be used to produce the secreted (I), by inserting the
CC nucleic acids into a host cell and culturing the cell to express the
CC protein. (I) proteins and polynucleotides may be used to prevent,
CC diagnose and treat immune/haematopoietic-related diseases, especially
CC cancers and cancer metastases of haematopoietic-derived cells. AAK64703
CC to AAK87694 represent human immune/haematopoietic antigen genomic
CC sequences from the present invention. AAK54942 to AAK54950 and AAM82169
CC represent sequences used in the exemplification of the present invention

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
PS   claim 16; seqid 100; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     /clone_lib="NICHD_Hs_Ov1"
                     /note="Vector: pDNR-LIB; Site_1: SfiI (ggccattatggcc);
                     Site_2: SfiI (ggccgcctcggcc); Library is oligo-dT primed
                     and directionally cloned. Granulosa lutein cells aspirated
                     from preovulatory folicles of normal cycling women
                     undergoing ovulation induction for infertility due to male
                     factor and normal doners. The cells were from follicles
                     stimulated with Lupron, FSH and hCG. 5' and 3' adaptors
                     were used in cloning as follows: 5' adaptor sequence:
                     5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence:
                     5'-ATTCTAGAGGCCGAGGCGGCCGACATG-dT(30)BN-3' (where B = A,
                     C, or G and N = A, C, G, or T). Average insert size 2.23
                     kb (range 1.0-4.5 kb). 14/15 colonies contained inserts by
                     PCR. This library was enriched for full-length clones and
                     was constructed by Clontech Laboratories (Palo Alto, CA)."

This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
sequenced by MediGenomix (Martinsried/Germany) within the cDNA sequencing consortium of the German Genome Project. No s1 sequence available.
This clone (DKFZp686B2033) is available at the RZPD in Berlin.
Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059 Berlin- Charlottenburg, GERMANY; Email: clone@rzpd.de.

                     Library is oligo-dT primed and directionally cloned. cDNA
                     was prepared from a glandular pool of tissues from thyoid,
                     parathyroid, adrenal, cortex and pineal gland.  5' and 3'
                     adaptors were used in cloning as follows: 5' adaptor
                     sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor sequence:
                     5'-ATTCTAGAGGCCGAGGCGGCCGACATG-dT(30)BN-3' (where B = A,
                     C, or G and N = A, C, G, or T). Average insert size 1.38
                     kb (range 0.60-3.5 kb). 15/15 colonies contained inserts
                     by PCR. This library was enriched for full-length clones
                     and was constructed by Clontech Laboratories (Palo Alto,
                     CA). Note: this is a NIH_MGC Library."

            This is the 5' sequence of the clone insert
            Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
            Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
            sequenced by AGOWA (Berlin/Germany) within the cDNA sequencing
            consortium of the German Genome Project.
            No s1 sequence available.
            This clone (DKFZp686N032) is available at the RZPD in Berlin.
            Please contact the RZPD: Ressourcenzentrum, Heubnerweg 6, 14059
            Berlin-Charlottenburg, GERMANY; Email: clone@rzpd.de.

            Clones are derived from the human BAC library RPCI-11. For BAC
            library availability, please contact Pieter de Jong
            (pieter@dejong.med.buffalo.edu). Clones may be purchased from
            BACPAC Resources (http://bacpac.med.buffalo.edu/ordering) or from
            Research Genet cs (info@resgen.com). BAC end search page:
            http://www.tigr.org/tdb/humgen/bac_end_search/bac_end_search.html.
            Seq primer: SP6
            Class: BAC ends.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

AL355530
LOCUS       AL355530              196934 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-338L11 on chromosome 10 Contains
            the 5' end of the gene for novel gene (KIAA0534) and a CpG island,
            complete sequence.
ACCESSION   AL355530
VERSION     AL355530.6  GI:8894326
KEYWORDS    HTG; KIAA0534.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jul 1, 2000 this sequence version replaced gi:8670617.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 10, constructed by the Sanger Centre Chromosome 10
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr10
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC

            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.
            RP11-338L11 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6.

COMMENT     On Feb 5, 2002 this sequence version replaced gi:15809168.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0366L15
                Drafting Center: WIBR
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the right is RP11-343H10.  Actual start of
            this clone is at base position 1 of RP11-366L15.

            The clone RP11-366L15 contains a 150 bp insertion not sequenced in
            the right neighboring clone, RP11-343H10. This insertion sequence
            is being submitted as H_NH0366L15_F1.

            The sequence of AC020681 has been incorporated into AC093818.

COMMENT     On Mar 1, 2002 this sequence version replaced gi:2275181.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: sapiens@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_RG343H22
            --------------.

            NOTICE:  This sequence may not represent the entire insert of this
            clone.  It may be shorter because we only sequence overlapping
            clone sections once, or longer because we provide a small overlap
            between neighboring data submissions.

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            The sequence of this clone was established as part of a mapping and
            sequencing collaboration between the NHGRI Chromosome 7 Mapping
            Project and the Washington University Genome Sequencing Center. For
            additional information about the map position of this sequence, see
            http://www.nhgri.nih.gov/DIR/GTB/CHR7 or
            mailto:egreen@nhgri.nih.gov

            SOURCE INFORMATION:
            Clone CTA-343H22 is from a release of the human BAC library
            CITB-HS-A. The library contains cloned DNA from human sperm. See:
            Shizuya et al., Proc. Natl. Acad. Sci. USA 89:8794-7 (1992); U-J.
            Kim et al., Genomics 34:213-8 (1996). The clone is available from
            Research Genetics, Inc. (http://www.resgen.com).
            VECTOR:  pBeloBAC11
            Selection:  chloramphenicol

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the right is RP11-573B16.  Actual start of
            this clone is at base position 1 of CTA-343H22 actual end is at
            base position 131458 of CTA-343H22.

  TITLE     Direct Submission
  JOURNAL   Submitted (05-NOV-2002) DOE Joint Genome Institute, 2800 Mitchell
            Drive, Walnut Creek, CA 94598, USA
COMMENT     On Nov 5, 2002 this sequence version replaced gi:19424423.
            Draft Sequence Produced by DOE Joint Genome Institute
            www.jgi.doe.gov
            Finishing Completed at Stanford Human Genome Center
            www-shgc.stanford.edu
            Quality: Phrap Quality >=40 99.7% of Sequence;
            Estimated Total Number of Errors is 0.2.
            NOTE:  This insert is not the entire sequence of the clone (entire
            sequence is 201.6kb). It is clipped at the overlaps with AC027342
```

```
          and AC010621. The number of bases overlapped with AC027342 is 5439
          and with AC010621 is 28528.

  TITLE     Direct Submission
  JOURNAL   Submitted (06-MAY-2000) Whitehead Institute/MIT Center for Genome
            Research, 320 Charles Street, Cambridge, MA 02141, USA
COMMENT     On Sep 23, 2000 this sequence version replaced gi:8247861.
            All repeats were identified using RepeatMasker:
            Smit, A.F.A. & Green, P. (1996-1997)
            http://ftp.genome.washington.edu/RM/RepeatMasker.html
            -------------- Genome Center
                Center: Whitehead Institute/ MIT Center for Genome Research

            -------------- Project Information
                Center project name: L5802
                Center clone name: 206_N_2
            -------------- Summary Statistics
                Sequencing vector: M13; M77815; 100% of reads
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 0.960731
                Consensus quality: 167659 bases at least Q40
                Consensus quality: 175736 bases at least Q30
                Consensus quality: 178914 bases at least Q20
                Insert size: 154000; agarose-fp
                Insert size: 180936; sum-of-contigs
                Quality coverage: 5.0 in Q20 bases; agarose-fp
                Quality coverage: 4.3 in Q20 bases; sum-of-contigs
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 37 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *       1     1154: contig of 1154 bp in length

RESULT 14
HSU116E9

LOCUS	HSU116E9 25158 bp DNA linear PRI 18-MAY-2005
DEFINITION	Human DNA sequence from clone LL0XNC01-116E9 on chromosome Xq22, complete sequence.
ACCESSION	Z95333
VERSION	Z95333.2 GI:23304713
KEYWORDS	HTG.
SOURCE	Homo sapiens (human)
ORGANISM	Homo sapiens Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE	1 (bases 1 to 25158)
AUTHORS	Grafham,D.
TITLE	Direct Submission
JOURNAL	Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT	On Sep 23, 2002 this sequence version replaced gi:2213445. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome X, constructed by the Sanger Centre Chromosome X Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/ChrX LL0XNC01-116E9 is from the Lawrence Livermore National Laboratory flow-sorted X chromosome cosmid library LL0XNC01 VECTOR: lawrist16 ---------- Genome Center Center: Wellcome Trust Sanger Institute Center code: SC Web site: http://www.sanger.ac.uk Contact: vega@sanger.ac.uk ---------- This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

                3': Mapping in progress
            --------------------
            Sequence Quality Assessment:
             This entry has been annotated with sequence quality
             estimates computed by the Phrap assembly program.
             All manually edited bases have been reduced to quality zero.
             Quality levels above 40 are expected to have less than
             1 error in 10,000 bp.
             Base-by-base quality values are not generally visible from the
             GenBank flat file format but are available as part
             of this entry's ASN.1 file.

            This sequence was finished as follows unless otherwise noted:
            all regions were either double-stranded or sequenced with an
            alternate chemistry or covered by high quality data (i.e., Phred
            quality >= 30); an attempt was made to resolve all sequencing
            problems, such as compressions and repeats; all regions were
            covered by at least one plasmid subclone or more than one M13
            subclone; and the assembly was confirmed by restriction digest.
            --------------------
            Sequence Validation:
             This sequence has been validated by Multiple Complete Digest
             fingerprinting. Comparison of the experimentally derived digest
             fragments with sequence-predicted fragments is given below.
             The electronically-digested sequence consists of both insert and
             vector, in order to accurately represent the entire circular BAC.
             Small fragments below a variable cutoff (approximately 400-800 bp)
             are not resolved in the fingerprint and hence do not appear
             in the table. There are no significant remaining discrepancies
             between the experimental and predicted values. Uniquely ordered
             fragments are separated by dashed lines.

                Quality coverage: 4.3 in Q20 bases.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 15 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.

COMMENT     On Mar 27, 2002 this sequence version replaced gi:15021986.
            -------------- Genome Center
                Center: Genome Therapeutics Corporation
                Center code: GTC
                Web site: http://www.genomecorp.com/
                Contact: gtc-seqcenter@genomecorp.com
            -------------- Project Information
                Center project name: hg031

                IMPORTANT: This sequence is the entire
                insert of clone RP11-295O23.
                The true right end of clone RP11-506P9 is at
                2000 in this sequence.
            -------------- Summary Statistics
                Sequencing vector: N/A
                Chemistry: Dye-terminator Big Dye; 100% of reads
                Assembly program: Phrap; version 990315
            --------------.

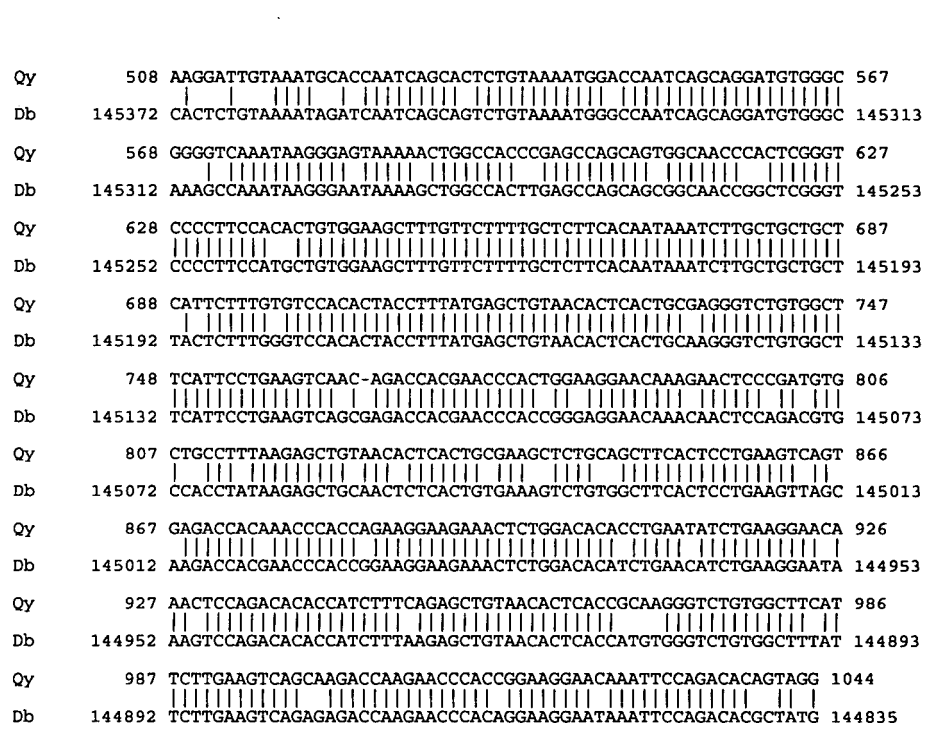
Contact: vega@sanger.ac.uk



This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one subclone; and the assembly was confirmed by restriction digest,
except on the rare occasion of the clone being a YAC.

RESULT 22
AL160399
LOCUS AL160399 126595 bp DNA linear PRI 18-MAY-2005
DEFINITION Human DNA sequence from clone RP11-161N21 on chromosome 6, complete sequence.
ACCESSION AL160399
VERSION AL160399.13 GI:14018252
KEYWORDS HTG.
SOURCE Homo sapiens (human)
ORGANISM Homo sapiens
Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Euarchontoglires; Primates; Catarrhini; Hominidae; Homo.
REFERENCE 1 (bases 1 to 126595)
AUTHORS Holt,K.
TITLE Direct Submission
JOURNAL Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
COMMENT On May 11, 2001 this sequence version replaced gi:13751310.
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:
Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated from part of bacterial clone contigs of human chromosome 6, constructed by the Sanger Centre Chromosome 6 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGP/Chr6
RP11-161N21 is from the library RPCI-11.1 constructed by the group of Pieter de Jong. For further details see http://www.chori.org/bacpac/home.htm

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 10 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     3025: contig of 3025 bp in length

COMMENT On Sep 27, 2000 this sequence version replaced gi:9945236.
---------- Genome Center
Center: Washington University Genome Sequencing Center
Center code: WUGSC
Web site: http://genome.wustl.edu
Contact: submissions@watson.wustl.edu
---------- Summary Statistics
Center project name: H_NH0341F20
----------.

NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-634D21; the clone sequenced to the right is RP11-219B1. Actual start of this clone is at base position 1 of RP11-341F20; actual end is at base position 190018 of RP11-341F20.

                Quality coverage: 11.4x in Q20 bases; sum-of-contigs
            ----------.
            Overlapping Sequences:
                5': RP11-655N11 (UWGC:bc0519) AC099057, 55267-bp overlap
                3': RP11-638F19 (UWGC:bc0505) AC107622, 53874-bp overlap
            --------------------
            Sequence Quality Assessment:
             This entry has been annotated with sequence quality
             estimates computed by the Phrap assembly program.
             All manually edited bases have been reduced to quality zero.
             Quality levels above 40 are expected to have less than
             1 error in 10,000 bp.
             Base-by-base quality values are not generally visible from the
             GenBank flat file format but are available as part
             of this entry's ASN.1 file.

            This sequence was finished as follows unless otherwise noted:
            all regions were either double-stranded or sequenced with an
            alternate chemistry or covered by high quality data (i.e., Phred
            quality >= 30); an attempt was made to resolve all sequencing
            problems, such as compressions and repeats; all regions were
            covered by at least one plasmid subclone or more than one M13
            subclone; and the assembly was confirmed by restriction digest.
            --------------------
            Sequence Validation:
             This sequence has been validated by Multiple Complete Digest
             fingerprinting. Comparison of the experimentally derived digest
             fragments with sequence-predicted fragments is given below.
             The electronically-digested sequence consists of both insert and
             vector, in order to accurately represent the entire circular BAC.
             Small fragments below a variable cutoff (approximately 400-800 bp)
             are not resolved in the fingerprint and hence do not appear
             in the table. There are no significant remaining discrepancies
             between the experimental and predicted values. Uniquely ordered
             fragments are separated by dashed lines.
                   BglII                  NsiI                HindIII

            Contact: humquery@sanger.ac.uk
            -------------- Project Information
            Center project name: bSS75O11
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 92859 bases at least Q40
            Consensus quality: 93559 bases at least Q30
            Consensus quality: 94137 bases at least Q20
            Insert size: 94468; sum-of-contigs
            Insert size: 99204; 1.9% error; agarose-fp
            Quality coverage: 4.88x in Q20 bases; sum-of-contigs Quality
            coverage: 4.81x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 4 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    31974: contig of 31974 bp in length
            *    31975    32074: gap of 100 bp
            *    32075    51357: contig of 19283 bp in length
            *    51358    51457: gap of 100 bp
            *    51458    83889: contig of 32432 bp in length
            *    83890    83989: gap of 100 bp
            *    83990    94768: contig of 10779 bp in length.

            --------------
            During sequence assembly data is compared from overlapping clones.
            Where differences are found these are annotated as variations
            together with a note of the overlapping clone name. Note that the
            variation annotation may not be found in the sequence submission
            corresponding to the overlapping clone, as we submit sequences with
            only a small overlap as described above.
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one plasmid subclone or more than one M13 subclone; and the
            assembly was confirmed by restriction digest, except on the rare
            occasion of the clone being a YAC.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs constructed by
            the MHC Haplotype Consortium and collaborators. Further information
            can be found at

            -------------- Project Information
            Center project name: bSS105012
            -------------- Summary Statistics
            Assembly program: XGAP4; version 4.5
            Chemistry: Dye-terminator; 100% of reads
            Consensus quality: 187436 bases at least Q40
            Consensus quality: 190482 bases at least Q30
            Consensus quality: 192676 bases at least Q20
            Insert size: 194867; sum-of-contigs
            Insert size: 136251; 16.1% error; agarose-fp
            Quality coverage: 3.71x in Q20 bases; sum-of-contigs Quality
            coverage: 5.55x in Q20 bases; agarose-fp
            --------------.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 23 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1    17025: contig of 17025 bp in length
            *    17026    17125: gap of 100 bp

---------- Summary Statistics
Center project name: H_NH0068O01
----------.

NOTICE:

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-650N7; the clone sequenced to the right is RP11-769N3, 2000 bp overlap. Actual start of this clone is at base position 1 of RP11-68O1.

Data from AC083851 and AC021940 was used to finish this clone, AC084277. Polymorphisms have been identified between AC083851, AC021940 and AC084277.

            Quality coverage:  12.22 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 3 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1188: contig of 1188 bp in length
            *     1189     1288: gap of unknown length

  TITLE     Direct Submission
  JOURNAL   Submitted (21-APR-2005) Genome Sequencing Center, Washington
            University School of Medicine, 4444 Forest Park Parkway, St. Louis,
            MO 63108, USA
COMMENT     On Feb 21, 2002 this sequence version replaced gi:17933873.
            -------------- Genome Center
                Center: Washington University Genome Sequencing Center
                Center code: WUGSC
                Web site: http://genome.wustl.edu
                Contact: submissions@watson.wustl.edu
            -------------- Summary Statistics
                Center project name: H_NH0454B03
                Drafting Center: WIBR
            --------------.

            NOTICE:

            This sequence was finished as follows unless otherwise noted:
            all regions were double stranded, sequenced with an alternate
            chemistry, or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one subclone; and the assembly was confirmed by
            restriction digest.

            MAPPING INFORMATION:
            Mapping information for this clone was provided by Dr. Wes Warren,
            Department of Genetics, Washington University, St. Louis MO. For
            additional information about the map position of this sequence, see
            http://genome.wustl.edu

            SOURCE INFORMATION:
            The RPCI-11 human BAC library was made from the blood of one male
            donor, as described by Osoegawa,K., Woon,P.Y., Zhao,B., Frengen,E.,
            Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved
            approach for construction of bacterial artificial chromosome
            libraries. Genomics 51:1-8. The clone may be obtained either from
            Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong
            and coworkers at http://www.chori.org
            VECTOR:  pBACe3.6

            NEIGHBORING SEQUENCE INFORMATION:
            The clone sequenced to the left is RP11-337B18, 2000 bp overlap;
            the clone sequenced to the right is RP11-241F6, 2000 bp overlap.
            Actual start of this clone is at base position 167881 of
            RP11-337B18; actual end is at base position 2890 of RP11-241F6.

            Polymorphisms have been identified between AC092632, AC096560, and
            AC024403.

            The sequence of AC024403 has been incorporated into AC104697.

            Estimated insert size: 132922; sum-of-contigs estimation
            Quality coverage:  7.34 in Q20 bases; agarose-fp estimation
            Quality coverage:  7.43 in Q20 bases; sum-of-contigs estimation.
            * NOTE: This is a 'working draft' sequence. It currently
            * consists of 5 contigs. The true order of the pieces
            * is not known and their order in this sequence record is
            * arbitrary. Gaps between the contigs are represented as
            * runs of N, but the exact sizes of the gaps are unknown.
            * This record will be updated with the finished sequence
            * as soon as it is available and the accession number will
            * be preserved.
            *        1     1253: contig of 1253 bp in length
            *     1254     1353: gap of unknown length
            *     1354     5163: contig of 3810 bp in length

AL645568
LOCUS       AL645568               136031 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone RP11-296O14 on chromosome 1 Contains
            a pseudogene similar to part of ribosomal protein L26 (RPL26), a
            novel pseudogene and a novel gene, complete sequence.
ACCESSION   AL645568
VERSION     AL645568.9  GI:18072559
KEYWORDS    HTG; RPL26.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Jan 6, 2002 this sequence version replaced gi:17977921.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 1, constructed by the Sanger Centre Chromosome 1 Mapping
            Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr1
            RP11-296O14 is from the library RPCI-11.2 constructed by the group
            of Pieter de Jong. For further details see
            http://www.chori.org/bacpac/home.htm
            VECTOR: pBACe3.6
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted; all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

AL591074
LOCUS       AL591074               203076 bp    DNA     linear   PRI 18-MAY-2005
DEFINITION  Human DNA sequence from clone XXyac-60D10 on chromosome 20 Contains
            the CST5 gene for cystatin D, the CST2 gene for cystatin SA, the
            CST1 gene for cystatin SN and the CSTP2 gene for cystatin
            pseudogene 2, complete sequence.
ACCESSION   AL591074
VERSION     AL591074.10  GI:15858969
KEYWORDS    HTG; CST1; CST2; CST5; CSTP2; cystatin D; cystatin SA; cystatin SN.

  AUTHORS   Phillimore,B.
  TITLE     Direct Submission
  JOURNAL   Submitted (13-MAY-2005) Wellcome Trust Sanger Institute, Hinxton,
            Cambridgeshire, CB10 1SA, UK. E-mail enquiries: vega@sanger.ac.uk
            Clone requests: clonerequest@sanger.ac.uk
COMMENT     On Oct 2, 2001 this sequence version replaced gi:15705266.
            The following abbreviations are used to associate primary accession
            numbers given in the feature table with their source databases:
            Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information
            on the WORMPEP database can be found at
            http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence
            was generated from part of bacterial clone contigs of human
            chromosome 20, constructed by the Sanger Centre Chromosome 20
            Mapping Group.  Further information can be found at
            http://www.sanger.ac.uk/HGP/Chr20
            XXyac-60D10 is from a ICRF YAC Library
            VECTOR: pYAC4
            -------------- Genome Center
            Center: Wellcome Trust Sanger Institute
            Center code: SC
            Web site: http://www.sanger.ac.uk
            Contact: vega@sanger.ac.uk
            --------------
            This sequence was finished as follows unless otherwise noted: all
            regions were either double-stranded or sequenced with an alternate
            chemistry or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by at least
            one subclone; and the assembly was confirmed by restriction digest,
            except on the rare occasion of the clone being a YAC.

TITLE Direct Submission
JOURNAL Submitted (01-FEB-2001) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA
COMMENT On Jan 31, 2001 this sequence version replaced gi:12585011.
INFORMATION: http://www.hgsc.bcm.tmc.edu/ or email gc-help@bcm.tmc.edu

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

ANNOTATION OF FEATURES:
STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.
Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL:
http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

QUALSTAT-REPORT----------

---------- Summary Statistics ----------

Contig length:	166357
Phrap values in estimate:	165586
Average error rate (BCM-Phrap estimate):	7.20476e-06
Fraction of Phrap values less than 40 :	0.00725907
Number of consensus changing edits:	184
Number of N's in consensus :	0

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

XX
PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 8; Fig 6; 540pp; English.
XX
CC The present sequence represents the HC-contig derived from normal human
CC chromosome 10, 10q25.2 region. This region can be naturally mutated to
CC produce an unusual chromosomal marker referred to as mardel(10). The
CC mardel(10) marker is mitotically stable and contains a functional
CC neocentromere at a location regarded as non-centromeric. This
CC neocentromere maps to q25.2 on chromosome 10. The specification describes
CC nucleic acid sequences derived from a eukaryotic chromosome, including a
CC neocentromere or its functional derivative or hybrid, that are able, in a
CC compatible cell, of replicating, acting as extra-chromosomal element and
CC segregating during cell division. The sequences can be used to construct
CC artificial chromosomes for use in gene therapy comprising a replicable,
CC segregating nucleic acid that confers a specific phenotype on cells.
CC Human artificial chromosomes can propagate in human cells and carry large
CC amounts of DNA (e.g. therapeutic genes), and, being extra-chromosomal,
CC they are not mutagenic. The artificial chromosomes are also useful for
CC generation of transgenic plants and animals, in production of proteins
CC and to make diagnostic reagents, e.g. for expression of cytokines,
CC receptors and growth factors, or to increase the copy number of a gene in
CC a cell. The constructs may also be used for functional and structural
CC analysis of chromosomes

PT New isolated nucleic acid comprising neocentromere sequences from
PT eukaryotic chromosome - used to produce replicable, segregating
PT artificial chromosomes that can carry large amounts of DNA for gene
PT therapy.
XX
PS Claim 9; Fig 16A; 540pp; English.
XX
CC The present sequence represents the NC-contig derived from a mutated
CC human chromosome 10, 10q25.2 region. The sequence contains an unusual
CC chromosomal marker referred to as mardel(10). The mardel(10) marker is
CC mitotically stable and contains a functional neocentromere at a location
CC regarded as non-centromeric. This neocentromere maps to q25.2 on
CC chromosome 10. The specification describes nucleic acid sequences derived
CC from a eukaryotic chromosome, including a neocentromere or its functional
CC derivative or hybrid, that are able, in a compatible cell, of
CC replicating, acting as extra-chromosomal element and segregating during
CC cell division. The sequences can be used to construct artificial
CC chromosomes for use in gene therapy comprising a replicable, segregating
CC nucleic acid that confers a specific phenotype on cells. Human artificial
CC chromosomes can propagate in human cells and carry large amounts of DNA
CC (e.g. therapeutic genes), and, being extra-chromosomal, they are not
CC mutagenic. The artificial chromosomes are also useful for generation of
CC transgenic plants and animals, in production of proteins and to make
CC diagnostic reagents, e.g. for expression of cytokines, receptors and
CC growth factors, or to increase the copy number of a gene in a cell. The
CC constructs may also be used for functional and structural analysis of
CC chromosomes

PT   Recombinant nucleic acid useful for diagnosis and treatment of carcinoma
PT   comprises a nucleotide sequence.
XX
PS   Claim 1; SEQ ID NO 520; 0pp; English.
XX
CC   The present invention relates to novel DNA and protein sequences which
CC   are associated with carcinomas. The sequences are useful for: (i) for
CC   screening drug candidates; (ii) for screening of bioactive agent capable
CC   of binding to Carcinoma Associated Protein (CAP); (iii) for screening of
CC   a bioactive agent capable of modulating the activity of CAP; (iv) for
CC   evaluating the effect of a candidate carcinoma drug; (v) for diagnosing
CC   carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating
CC   carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;
CC   (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for
CC   determining Carcinoma Associated (CA) gene copy number. In addition, the
CC   CA genes are useful as DNA vaccines and the CAP are useful as markers of
CC   carcinoma including lymphoma. The present sequence is one such CA coding
CC   sequence. Note: This patent is an equivalent to basic patent
CC   US2002182586A1, for which no sequence data was published

PT   Nucleic acid array useful for detecting cancer associated nucleic acid,
```

```
PT   comprises two or more nucleic acid probes.
XX
PS   Disclosure; SEQ ID NO 449; 198pp; English.
XX
CC   The invention relates to a nucleic acid array for detecting a cancer
CC   associated (CA) nucleic acid, comprising two or more nucleic acid probes.
CC   The invention also relates to a peptide array comprising two or more
CC   isolated polypeptides encoded by a CA nucleic acid sequence, a compound
CC   that binds to a polypeptide, an isolated antibody or its fragment which
CC   binds to a polypeptide, which is prepared by immunizing a host animal
CC   with a composition comprising the polypeptide or its antigen binding
CC   fragment and collecting cells from the host expressing antibodies against
CC   the antigen or its antigen binding fragment, a composition comprising the
CC   antibody and a carrier, a method of screening for anticancer activity, a
CC   method of detecting a CA nucleic acid, a method of diagnosing cancer, a
CC   method of treating cancer and a method of inhibiting expression of a CA
CC   nucleic acid in a cell. The CA nucleic acids are useful for detecting CA
CC   nucleic acids. The antibody is useful for detecting the presence or
CC   absence of cancer cells in an individual which involves contacting cells
CC   from the individual with the antibody and detecting a complex of a CA
CC   protein from the cancer cells and the antibody, where the detection of
CC   the complex correlates with the presence of cancer cells in the
CC   individual. The composition is useful for inhibiting growth of cancer
CC   cells in an individual or for delivering a therapeutic agent to cancer
CC   cells in an individual. The invention is also useful for diagnosing
CC   cancer, for treating cancer and for inhibiting expression of a CA gene in
CC   a cell. This sequence represents human cancer-associated genomic DNA of
CC   the invention.

PT   Novel 2495 cDNA, useful for treating osteoporosis, neurological diseases,
PT   Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.
XX
PS   Claim 1; SEQ ID NO 1837; 2449pp; English.
XX
CC   The invention relates to 2495 novel polynucleotides (I) and their encoded
CC   polypeptides, sequences hybridizing to these nucleotides, sequences
CC   encoding partial polypeptides and sequences having 70% or 90% identity to
CC   the nucleotide and protein sequences. The nucleotides and polypeptides
CC   are useful as diagnostic markers or therapeutic target for the diseases
CC   or morbid states. They are also useful for treating osteoporosis,
CC   neurological diseases, Alzheimer's diseases, Parkinson's diseases,
CC   dementia and various cancers. This sequence corresponds to a nucleotide
CC   sequence of the invention.

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
PS   claim 16; seqid 602; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
```

```
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   New nucleic acid molecules encoding 48 human secreted proteins for
PT   diagnosing, preventing, treating or ameliorating medical conditions and
PT   used as food additives or preservatives.
XX
PS   Claim 1; Page 338; 395pp; English.
XX
CC   The polynucleotide sequences given in AAC74280 to AAC74327 encode the
CC   human secreted proteins given in AAB39310 to AAB39357. AAB39358 to
CC   AAB39400 represent human secreted polypeptide sequences and proteins
CC   homologous to them, which are given in the exemplification of the present
CC   invention. Human secreted proteins have activities based on the tissues
CC   and cells the genes are expressed in. Examples of activities include:
CC   antiarthritic; immunosuppressive; antirheumatic; antiproliferative;
CC   cytostatic; cardiant; vasotropic; cerebroprotective; nootropic;
CC   neuroprotective; antibacterial; virucide; fungicide; ophthalmological;
CC   and vulnerary. The polynucleotides and polypeptides can be used to
CC   prevent, treat or ameliorate a medical condition in e.g. humans, mice,
CC   rabbits, goats, horses, cats, dogs, chickens or sheep. They can also used
CC   in diagnosing a pathological condition or susceptibility to a
CC   pathological condition. Disorders which are diagnosed or treated include
CC   autoimmune diseases, hyperproliferative disorders, cardiovascular
CC   disorders, cerebrovascular disorders, angiogenesis, nervous system
```

```
CC   disorders, infections caused by bacteria, viruses and fungi and ocular
CC   disorders. The polypeptides can also be used to aid wound healing and
CC   epithelial cell proliferation, to prevent skin aging due to sunburn, to
CC   maintain organs before transplantation, for supporting cell culture of
CC   primary tissues, to regenerate tissues and in chemotaxis. The
CC   polypeptides can also be used as a food additive or preservative to
CC   increase or decrease storage capabilities, fat content, lipid, protein,
CC   carbohydrate, vitamins, minerals, cofactors and other nutritional
CC   components. AAC74271 to AAC74279 and AAB39309 represent sequences used in
CC   the exemplification of the present invention

PT   New isolated cancer-associated polynucleotides and polypeptides useful
PT   for diagnosing, preventing or treating cancers, especially lymphoma and
PT   leukemia, or in screening for agents that modulate cancer.
XX
PS   claim 16; seqid 858; 310pp; English.
XX
CC   The invention relates to an isolated nucleic acid comprising at least 10
CC   contiguous nucleotides of any of the 233 polynucleotide sequences given
CC   in the specification, or its complement. The nucleic acids encode cancer-
CC   associated proteins. Also included are an expression vector comprising
CC   the isolated nucleic acid cited above, a host cell comprising the above
CC   recombinant nucleic acid or expression vector, a microarray for detecting
CC   a cancer-associated (CA) nucleic acid comprising at least one probe
CC   comprising at least 10 contiguous nucleotides of any of the above-
CC   mentioned nucleotide sequences, an isolated polypeptide (encoded within
CC   an open reading frame of a CA sequence selected from any of the 95
CC   polynucleotide sequences as mentioned in the specification, or its
CC   complement), an isolated antibody, (or its antigen binding fragment) that
CC   binds to the above polypeptide, a hybridoma that produces the above
CC   monoclonal antibody, a pharmaceutical composition comprising the above
CC   antibody and a pharmaceutical excipient, a kit for detecting cancer
CC   cells(comprising the antibody cited above, methods for diagnosing cancer
```

```
CC   or for detecting the presence or absence of cancer cells in an
CC   individual, a method for inhibiting growth of cancer cells in an
CC   individual, a method for delivering a therapeutic agent to cancer cells
CC   in an individual, an electronic library comprising the above
CC   polynucleotide or polypeptide (or their fragments), methods of screening
CC   for anticancer activity or for a bioactive agent capable of modulating
CC   the activity of a CA protein (CAP), methods for detecting cancer
CC   associated with expression of a polypeptide in a test cell sample, a
CC   method for treating cancers and a method for inhibiting the expression of
CC   CA gene in a cell. The composition and methods are useful for detecting,
CC   diagnosing, preventing and treating cancers, especially lymphoma and
CC   leukaemia. These may also be used in screening for agents that modulate
CC   cancer. The present sequence is a human CAP genomic sequence. Note: The
CC   sequence data for this patent did not form part of the printed
CC   specification, but was obtained in electronic format directly from WIPO
CC   at ftp.wipo.int/pub/published_pct_sequences

PT   Determining a response marker I or II by determining zero copies or at
PT   least one copy of EPHX2 haplotypes having associations with response to
PT   galantamine, useful for treating patients with Alzheimer's disease.
XX
PS   Claim 1; SEQ ID NO 1; 142pp; English.
XX
CC   This invention relates to a novel method of determining whether an
CC   individual has a response marker I or II. The method comprises
CC   determining whether the individual has zero copies or at least one copy
CC   of any of haplotypes 1-26 from 13 EPHX2 haplotypes having associations
CC   with response to galantamine and their corresponding polymorphic sites as
CC   given in the specification as Table 1. The invention may be useful for
CC   the development of compounds with a nootropic or neuroprotective activity
CC   acting as epoxide-hydrolase inhibitors. The methods and compositions of
CC   the present invention are useful for treating patients having one of the
CC   EPHX2 haplotypes, predicting the response of an individual to galantamine
CC   and for treating Alzheimers disease patients based upon their haplotype
CC   profile. The present sequence is that of the human epoxide hydrolase
CC   (EPHX2) gene of which haplotypes associated with galantamine response
CC   were identified for use in the method of the invention.

PT   New nucleic acid sequence encoding tramdorins, e.g. mouse tramd 1, mouse
PT   tramd 2, mouse tramd 3, human tramd 1, human tramd 2, human tramd 3 or
PT   rat tramd 1, useful for treating CNS, e.g. stroke, multiple sclerosis,
PT   trauma, neuropathic pain.
XX
PS   Example 6; Fig 9; 177pp; English.
XX
CC   The present invention describes an isolated nucleic acid sequence
CC   comprising a cDNA sequence encoding mouse tramdorin (tramd) 2, mouse
CC   tramd 3, human tramd 1, human tramd 2, human tramd 3 or rat tramd 1, or
CC   the genomic sequence of mouse tramd 1 or mouse tramd 3. Mouse tramd 1 is
CC   located to chromosome 11, whereas human tramd 1 is located to chromosome
CC   5q31-33. The tramd sequences have neuroprotective, nootropic, analgesic
CC   and cerebroprotective activities, and can be used in gene therapy. The
```

```
CC   nucleic acid sequences are useful for diagnosing and treating central
CC   nervous system (CNS) disorders such as multiple sclerosis, nerve injury,
CC   neuropathic pain, stroke or trauma, and non-CNS disorders. The present
CC   sequence represents the genomic sequence of the human tramdorin gene
CC   region, which is given in the exemplification of the present invention

XX
CC   Sequences AAT96468-77 represent claimed nucleic acid sequences derived
CC   from the multiple sclerosis related virus 1 (MSRV-1), especially from the
CC   env, pol and part of the gag gene region, but exclude the sub-region
CC   represented by AAT96527. This sequence is from clone FBd3 and is
CC   especially from the env gene. The sequence was isolated by RT-PCR using
CC   primer AAT96545. The above sequences are associated with multiple
CC   sclerosis and some are also associated with rheumatoid arthritis. Nucleic
CC   acid sequences from this virus can be used in the diagnosis of multiple
CC   sclerosis and rheumatoid arthritis

PT   New nucleic acid from retroviruses - useful for diagnosis, prevention and
PT   treatment of, e.g. multiple sclerosis.
XX
PS   Example 7; Fig 13; 286pp; English.
XX
CC   The present sequence represents the multiple sclerosis (MS) associated
CC   retrovirus-1 (MSRV-1) clone FBd3 DNA sequence. The invention provides
CC   complete or partial genomic sequences of the MSRV-1 pol gene, gag gene
CC   and env gene, and polypeptides encoded by these genes. The invention also
CC   provides antibodies raised against the polypeptides. The genomic
CC   sequences, polypeptides and antibodies are also claimed useful for
CC   diagnosing infection by MS and rheumatoid arthritis-associated viruses,
CC   and also for prevention and treatment of infection with these viruses

PT   New isolated or purified nucleic acid associated with multiple sclerosis
PT   and/or rheumatoid arthritis, useful for detecting a virus associated with
PT   multiple sclerosis or rheumatoid arthritis in a biological sample.
XX
PS   Example 7; Fig 13; 193pp; English.
XX
CC   The invention relates to an isolated or purified nucleic acid from a
CC   virus associated with multiple sclerosis and/or rheumatoid arthritis,
CC   multiple sclerosis-associated virus (MSRV)-1. The nucleic acids comprise
CC   pol, gag or reverse transcriptase genes (or their fragments) encoding the
CC   proteins or defined peptides (including immunodominant peptides,
CC   antigenic peptides or conserved motifs).Also included are a process for
CC   detecting a virus associated with multiple sclerosis or rheumatoid
CC   arthritis in a biological sample, a nucleic acid probe for the detection
CC   of a virus associated with multiple sclerosis or rheumatoid arthritis, a
CC   primer for the amplification by polymerisation of a nucleic acid of a
CC   viral material associated with multiple sclerosis or rheumatoid
CC   arthritis, a polypeptide exhibiting an inhibitory activity on the
CC   proteolytic, reverse transcriptase or ribonuclease H activity from MSRV,
CC   and an antibody directed against the MSRV-1 virus obtained by
CC   immunologically reacting a human or animal body or cells with an
CC   immunogenic agent consisting of the antigenic polypeptide defined above.
CC   The nucleic acids are useful for detecting a biological sample a virus
CC   associated with multiple sclerosis or rheumatoid arthritis, or for
CC   detecting in a biological sample, the presence of or exposure to a virus
```

```
CC   associated with multiple sclerosis or rheumatoid arthritis. The present
CC   sequence is an MSRV cDNA clone. Note: The SEQ ID numbers for the
CC   sequences as displayed in the main body of the patent do not match the
CC   SEQ ID numbers in the sequence listing. Consequently those sequences
CC   mentioned in the claims may not be the sequences the authors intended to
CC   claim.

XX
CC   This invention relates to a method of differentially modulating the
CC   growth or differentiation of blood endothelial cells (BEC) or lymphatic
CC   endothelial cells (LEC) comprises contacting endothelial cells with a
CC   composition comprising an agent that differentially modulates blood or
CC   lymphatic endothelial cells. Treating hereditary lymphoedema comprises
CC   identifying a human subject with lymphoedema and with a mutation in at
CC   least one allele of a gene encoding a LEC protein, where the mutation
CC   correlates with lymphoedema in human subjects, and with the proviso that
CC   the LEC protein is not VEGFR-3; and administering to the subject a
CC   composition comprising a lymphatic growth agent selected from VEGF-C or
CC   VEGF-D polypeptides and polynucleotides. The invention may be useful for
CC   the development of compounds with an antiangiogenic, cytostatic,
CC   vasotropic or antiinflammatory activity or for gene therapy. The method
CC   is useful in modulating the growth or differentiation of blood
CC   endothelial cells or lymphatic endothelial cells, in treating hereditary
CC   lymphoedema, in screening for an endothelial cell disorder or
CC   predisposition to the disorder or in monitoring the efficacy or toxicity
CC   of a drug on endothelial cells. The agent is useful in manufacturing a
CC   medicament for the differential modulation of blood vessel endothelial
CC   cell or lymphatic vessel endothelial cell growth or differentiation. The
CC   lymphatic growth agent may also be used in manufacturing a medicament for
CC   the treatment of hereditary lymphoedema resulting from a mutation in a
CC   LEC gene or of other diseases involving the lymphatic vessels, such as
CC   various inflammatory diseases and cancer metastasis via the lymphatic
CC   system. The present sequence is that of a human LEC/BEC differentially
CC   expressed gene which is related to the method of the invention.Note: This
CC   sequence does not appear in the specification but was obtained by the
CC   indexer using the source data given in table 14 of the specification.

XX
CC   The invention relates to a novel human polynucleotide and the encoded
CC   polypeptide. A polynucleotide of the invention may have a use in gene
CC   therapy. An oligonucleotide of the invention ADM06202-ADM06773 is useful
CC   as a primer for synthesizing the polynucleotide or as a probe for
CC   detecting the polynucleotide. The polynucleotides ADM01316-ADM03758 are
CC   useful in gene therapy, for developing a diagnostic marker or medicines
CC   for regulating their expression and activity, or as a target of gene
CC   therapy. The proteins ADM03759-ADM06201 encoded by the polynucleotides
CC   are useful as pharmaceutical agents. The present sequence represents a
CC   cDNA sequence of the invention.
